

Mapping the Gaps

Using GIS to Target Environmental Education Efforts

By Sarah G. Sunu
May 2014

Dr. Patrick N. Halpin, Advisor
Duke Nicholas School of the Environment

Masters project submitted in partial fulfillment of the requirements for the Master of Environmental Management degree in the Nicholas School of the Environment of Duke University.

ACKNOWLEDGEMENTS

Many thanks to those who have helped me along the way, including, but not limited to, Dr. Pat Halpin, Dr. Cindy Van Dover, John Fay, Sarah Bursky, Carole McCauley, Pam DiBona, the New England Ocean Science Education Collaborative, my family, and my incredibly supportive husband.

ABSTRACT

Evaluating the effect of environmental education is critical for measuring changes in community attitudes and behaviors, but to date little attention has been paid to the spatial distribution of environmental education programs. Mapping communities that are participating in environmental education programming can inform the decision-making process for program development and expansion, and help organizations identify unserved and underserved communities. Incorporating census data allows organizations to also identify communities meeting certain demographic criteria, such as environmental justice communities, for potential programming. The New England Ocean Science Education Collaborative (NEOSEC) is a network of fifty-four environmental education organizations with the common goal of improving ocean literacy. To facilitate that goal and identify gaps in programming reach, the spatial impacts of 18 NEOSEC member organizations were mapped into a geodatabase and paired with a model to identify target audiences. The completed geodatabase and model provide proof-of-concept tools for mapping the spatial reach of environmental education organizations. NEOSEC members and other environmental education organizations should consider mapping spatial impacts as a key component of program management and development.

INTRODUCTION

Effective environmental education programs can change human attitudes and behaviors and empower people to take environmentally responsible action (Hungerford and Volk, 1990). However, lack of proximity to environmental education organizations and lack of awareness of opportunities to participate prevent some communities from accessing environmental education programs. Geographic or geospatial information systems (GIS) can provide the tools necessary to assess these gaps in environmental education distribution. GIS has long been used to inform decision-making processes and identify geospatial gaps in access to health services (McLafferty, 2003) as well as urban planning and community-building, where GIS can provide program management analysis and evaluation for social change (Quon Huber et al., 2009). The utility of GIS as a decision-making tool for social impacts can and should be expanded into the environmental field (Gatrell, 1997), particularly in environmental-social applications, such as environmental education, which are heavily influenced by geospatial distribution and location (Downey, 2006; Matthies et al., 2007). Three key concepts for the type of GIS application detailed in this analysis are environmental education, environmental literacy, and environmental justice, which are described below.

Environmental Education

Non-formal environmental education organizations provide learning activities that can reinforce classroom experiences and contribute real-life context for participants, creating positive perceptions of science and the environment (Eshach, 2007). Environmental education programs that emphasize place-based learning can also provide participants with skills in analyzing and solving environmental problems within their community and increase willingness to address environmental issues (Smith, 2007). Harnessing the strengths of environmental education organizations by helping them to work together to provide programming to currently unserved or underserved communities can increase both program efficacy and organization efficiency.

Environmental Literacy

Environmental literacy is commonly considered to be the main objective of environmental education, and as defined by McBride et al., an environmentally literate person is someone who “...is informed about environmental issues and problems and possesses the attitudes and skills for solving them,” (2013, p. 7). Environmental educators work towards this objective in many different ways, and may emphasize different environmental systems or issues to reach specific audiences. Though definitions of environmental literacy and approaches to achieving environmental literacy vary across the field, a community of practice has formed around the general concept of environmental literacy as a societal and educational goal.

Environmental Justice

The United States Environmental Protection Agency (EPA) defines environmental justice as:

“...the fair and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. Fair treatment means that no group of people, including racial, ethnic, or socioeconomic group should bear a disproportionate share of the negative environmental consequences resulting from industrial, municipal, and commercial operations or the execution of federal, state, local, and tribal programs and policies.”

-U.S. Environmental Protection Agency, 1998, 1.1.1

Identifying environmental justice communities is a key component of ensuring that they receive environmental education programs that can lead to greater environmental literacy and equality.

NEOSEC: Environmental Education in New England

The fifty-four member organizations of NEOSEC include academic and independent research organizations, aquaria, non-profit organizations, and federal and state agencies. Massachusetts contributes the most NEOSEC member organizations, followed by Maine, Connecticut, New Hampshire, and Rhode Island.

Figure 1. NEOSEC Member Distribution by State. Currently no Vermont organizations are NEOSEC members.

Member organizations share the common goal of improving ocean literacy, a subset of environmental literacy focusing on ocean science and issues and consisting of seven key Ocean Literacy Principles describing how the ocean shapes life on earth (Ocean Literacy Network, 2013). NEOSEC members provide a variety of programs to coastal communities to increase ocean literacy, including summer camps, site visits, field experiences, curriculum development, and scientist partnerships. NEOSEC also provides opportunities for collaborations and resources, and seeks to increase the capacity of the member organizations (Chen et al., 2013). However, members currently do not have an understanding of their collective spatial reach and may be missing opportunities to serve new or at-risk communities, particularly environmental justice communities. Identifying such communities was expressed as a goal during conversations with NEOSEC members and staff.

The questions “What communities currently participate in NEOSEC member programs?” and “How can NEOSEC members use GIS tools to better reach unserved or underserved audiences, particularly in environmental justice communities?” were the focus of this analysis.

Priorities included:

- Mapping the spatial distribution of NEOSEC member programming to provide greater context for program management, expansion, and development;
- Developing a tool for members to help them select communities for expansion based on demographic criteria, such as environmental justice designations or target age groups; and
- Providing demographic information, such as languages spoken and ages of potential audiences, particularly in communities that are unserved and underserved, in order to better target new programming.

Methods

U.S. Census Data

The U.S. Census Bureau TIGER website provides pre-joined file geodatabases of census tract polygons (spatial subsections of county populations, similar to a neighborhood boundary, containing approximately 4000 people each; U.S. Census Bureau, 2008, p. 7) and demographic data (such as age, sex, language, race, income, and nationality) from the 2007-2011 American Community Survey (ACS) 5-Year Estimates. The 5-Year ACS is a compilation of five years of ACS data, and is the most reliable version of the product (U.S. Census Bureau, 2008). The 2007-2011 ACS data is reported state-by-state on the TIGER website. After reformatting and eliminating irrelevant data, six states were merged to create a New England demographic data set: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont. The file geodatabases were downloaded to ESRI's ArcMap 10.2 software and fields that were not directly related to the project focus were removed. See Appendix V for removed fields.

For this study, a community is defined as the collection of census tract polygons that create a city. To create the community polygons, the 2007-2011 census tract polygons were compared to community boundaries identified in Google Maps and then combined to create community polygons. In effect, neighborhoods within a large city were aggregated to create the city. Dissolving the census tracts into communities was

necessary for two reasons: (1) NEOSEC members filling out the survey would know community names but not census tract numbers; and (2) using the un-dissolved census tracts would create a database so big that it would limit options for putting the data online and would be unwieldy for the client.

Mean income for a community was calculated as the mean of the median income reported for each census tract polygon being combined; all other fields were summed across census tracts to provide a total estimate for a given community (i.e. the collection of census polygons). Percentages were calculated relative to the total population of a community. The community polygons created in this way do not always have a 1:1 relationship with existing community boundaries due to the spatially large rural census tracts that often contained several small cities.

Environmental Justice Populations

An environmental justice population, as defined by the Commonwealth of Massachusetts, meets any combination of the following four criteria:

- 25% or more residents identifying as a minority, or
- 25% or more residents are foreign-born, or
- 25% or more residents lack English language proficiency, or
- average median household income is less than 65% of the Massachusetts statewide median household income (statewide median in 2011 was \$62,859(U.S. Census Bureau, 2012); 65% of that is \$40,858.35)

--Commonwealth of Massachusetts, 2002, p. 3

At the time of this analysis the other New England states had not established concrete and transparent environmental justice population definitions, so the Massachusetts definition is used here to identify environmental justice communities.

Survey Design

A survey was designed to assess NEOSEC program characteristics and distribution within the New England region in consultation with a subset of NEOSEC members, including academic, non-profit, and government organizations. In addition to spatial data,

NEOSEC members expressed interest in measuring depth of programming using contact hours, the number of hours of participation in programming. Contact hours for this analysis were estimated using a program-based approach. For example, if the community of Swampscott, MA participated in offsite day programs (lasting 1 hour) and multi-day programs (lasting 5-10 hours) offered by the Northeastern University Marine Science Center, as a community it participated in a total of at least 6 program contact hours.

The survey incorporated questions regarding program type, including per-person and per program contact hours, program distribution, age ranges, languages, method of selecting program themes, method of selecting audiences, and Ocean Literacy Principles targeted. The full survey was 64 pages long (see Appendix IV). Because questions asked on the survey were about programming and not the experiences, attitudes, or behaviors of the individuals responding, the survey did not require Institutional Review Board approval.

The survey was delivered via email to the full NEOSEC membership on November 3rd, 2013, and was administered via Survey Monkey. Of the 54 members invited, 28 responded and 18 completed the survey. Survey responses that were without geospatial information (no locations for programs were provided—7 organizations), or where contact hours or reach were not feasible (indicating that questions had been misunderstood—3 organizations) were not included in the final analysis. One organization has since clarified their responses, and another completed the survey after the deadline; both will be added to the online tool, but were not included in this analysis. Results presented show the outcome from analysis of 18 NEOSEC institution responses (Fig 2).

Figure 2. Distribution of NEOSEC members by state who participated in the analysis.

NEOSEC Participants

New Hampshire and Connecticut are underrepresented in the analysis when considered against the overall makeup of NEOSEC (Fig 3). Within states, there are clusters of organizations in Boston and on Cape Cod in Massachusetts, and along Narragansett Bay in Rhode Island (Fig. 4).

Figure 3. Comparison of NEOSEC Members by state. Note the underrepresentation of Connecticut and New Hampshire in this analysis, as compared to the full NEOSEC membership; Massachusetts is also slightly overrepresented in this analysis.

Figure 4. Map of participating NEOSEC members

NEOSEC Member Data

A new geodatabase was created in ArcMap for each of participating member institution. Within each geodatabase, separate layers were created for each program type (defined below) based on the organization's survey responses.

Nine types of programming were identified by NEOSEC members as common:

- **Onsite day programs**, where community participants come to the environmental education organization's location or field site
- **Offsite day programs**, where environmental education organizations take programming to a school or other offsite location
- **Multi-day programs**, where community participants are attending more than one day of programming, such as a summer day camp or academy
- **Overnight programs**, where community participants are attending a multi-day, stay-away experience
- **High school internships**
- **Undergraduate internships**
- **Scientist partnership programs**, where environmental organizations build partnerships with community scientists
- **Public events**, which are open to the public at large (other programming types generally involve some form of registration or commitment)
- **Trainings**, which could take a variety of forms, including trainings for professionals in the field such as teachers, or for interested members of the community wishing to engage in citizen science projects.

An additional category, "materials", was recognized in the survey, but was not included as programming because the other categories involve direct and active delivery, while "materials" are passively delivered (i.e. downloading classroom curricula from a member organization's website).

Community Selection Tool Design

A key priority of this proof-of-concept was to provide a tool to identify target audiences in communities where NEOSEC members might wish to expand their programming. Using the 2007-2011 ACS data, a Community Selection Tool in ArcMap was created that allows organizations to specify demographic characteristics of interest and returns a map of communities meeting those characteristics. The user interface includes four environmental justice community characteristics and four age-group characteristics: percent minority, percent foreign-born, mean median household income, and percent speaking English “less than very well,” population under age 5, population age 5 to 9, population age 10 to 14, and population age 15 to 19, and allows the user to select threshold values for those characteristics (Figure 5). The model then creates a feature layer and runs a sequence of ‘Select Layer By Attribute’ queries of the data that incorporate the user-specified values, and ultimately creates a new layer with the communities meeting or exceeding all user-specified criteria (Figure 6). Additional information on the development of the ArcMap Community Selection Tool can be found in Appendix III; instructions for using the ArcMap Community Selection Tool can be found in Appendix II.

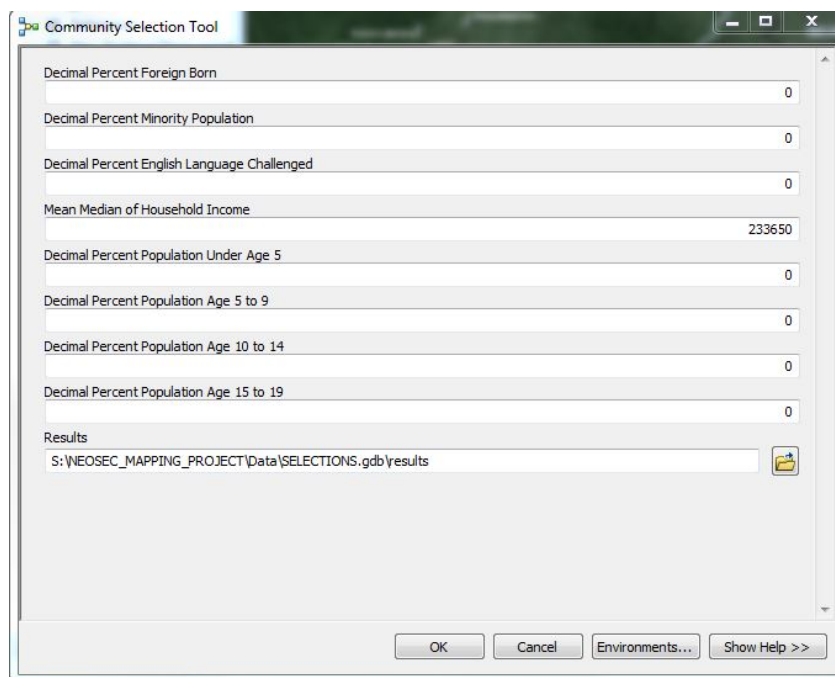

Figure 5. ArcMap Community Selection Tool user interface.

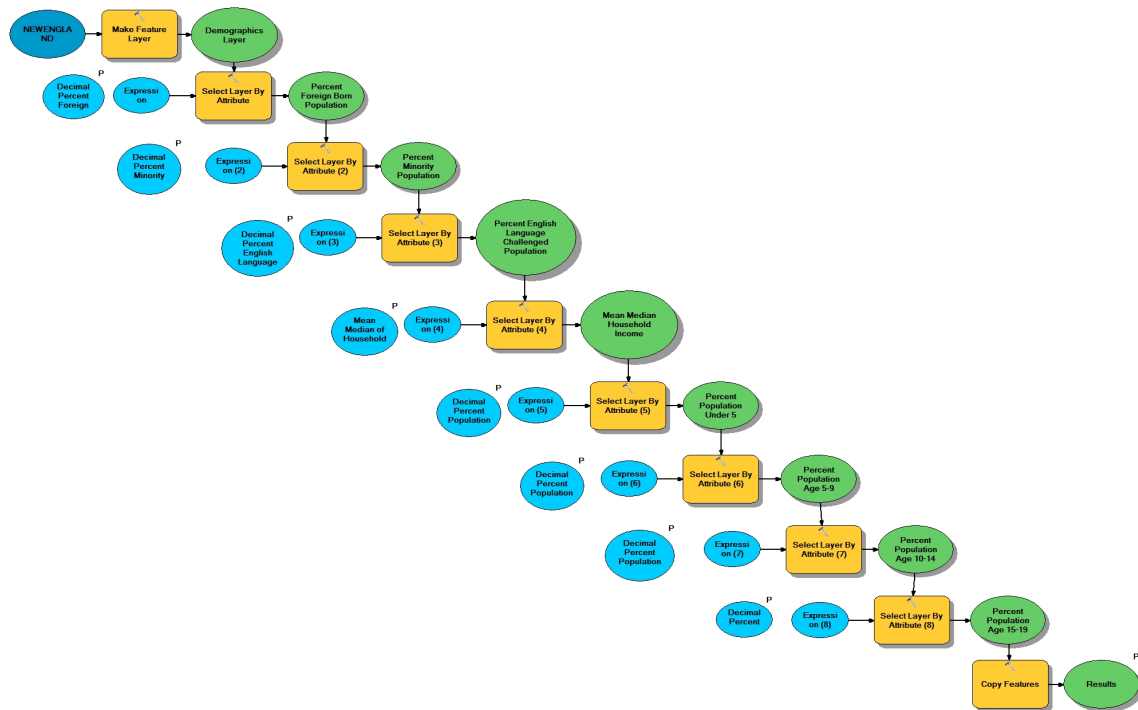

Figure 6. ArcMap Community Selection Tool model.

To ensure accessibility and utility of the tools and products for NEOSEC members, organization and demographic data were uploaded into ESRI's ArcGIS Online web portal and the data were shared using ArcGIS Online Mapping Application templates. Instructions for using the ArcGIS Online Mapping Applications are provided in Appendix I.

Limitations and Errors

An important caveat throughout this analysis is that only a subset of NEOSEC members participated; any trends noted may not hold true for the full Collaborative.

Because the participating NEOSEC member organizations had different methods for recording the information requested, there is the potential for error in how the data was reported. The manual method by which the communities were created and organizational data was transferred into ArcMap may have also introduced input error.

DATA ANALYSIS

Distribution

Spatial community coverage within states varies widely; the highest coverage is concentrated in Rhode Island, and the lowest in Vermont (Figure 7). Because some census tracts encompassed multiple communities due to their small populations, and other census tracts were combined to mirror community boundaries on Google Maps, the number of spatial communities served, as defined here, does not match the number of communities that exist in each state.

	CT	ME	MA	NH	RI	VT
Communities Served	13	54	222	60	39	4
Total Communities	168	247	319	159	39	142
Percent of Communities Served	8%	30%	70%	40%	100%	3%

Figure 7. Communities served by participating NEOSEC Members, by state.

NEOSEC Member reach is concentrated along the coast, with some inland communities participating in programming as well, particularly in Massachusetts (Fig.8).

Massachusetts and Rhode Island have more comprehensive coverage of coastal communities than Maine.

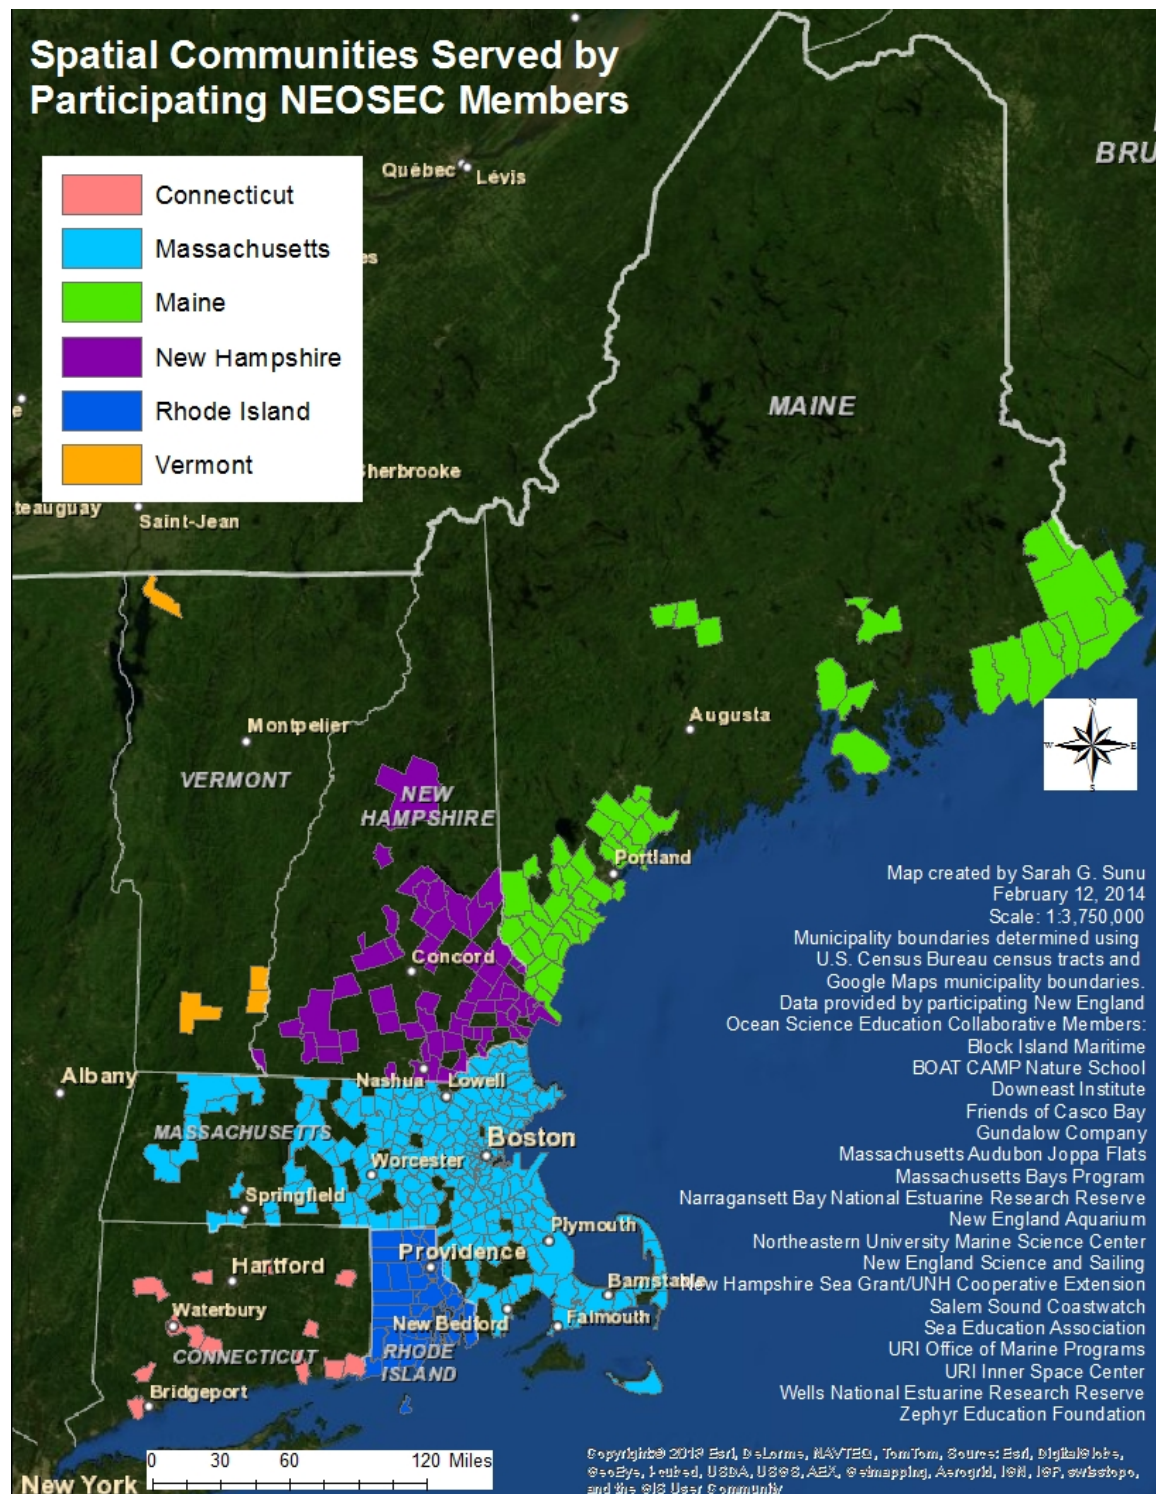

Figure 8. NEOSEC member program reach. Spatial communities are color-coded by state.

Most of the participating organizations provide programming to only one state, with a few exceptions; the New England Aquarium, the Narragansett Bay National Estuary Research Reserve, New England Science and Sailing, the Gundalow Company, the UNH Sea Grant\UNH Cooperative Extension, and the URI Inner Space Center (Fig. 4). The average number of states that a NEOSEC organization operates in is 1.6 (Fig. 4).

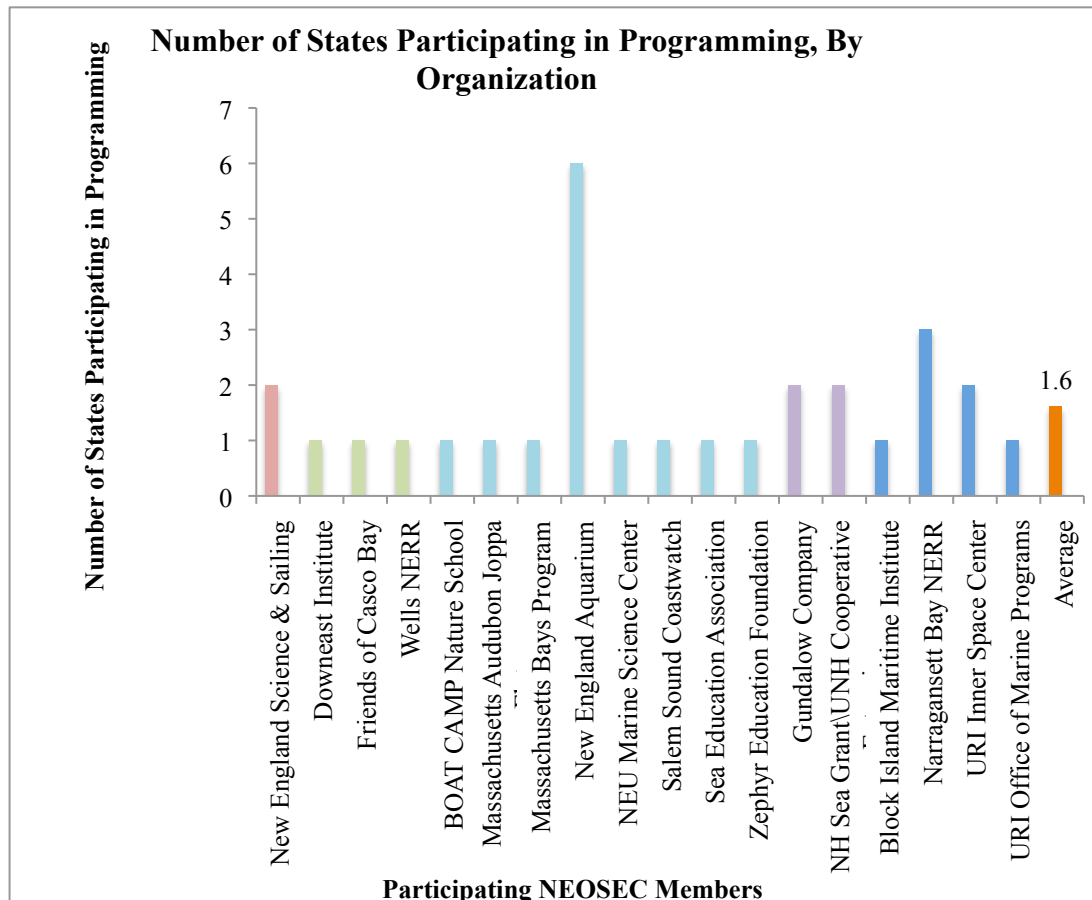

Figure 9. Number of states participating in programming. Pink: Connecticut, green: Maine, teal: Massachusetts, purple: New Hampshire, blue: Rhode Island.

The number of organizations providing programming in communities varies widely from state to state. All Rhode Island spatial communities receive programming from at least three participating member organizations, and sometimes as many as six (Fig. 10). More than half of Massachusetts spatial communities currently engaging in NEOSEC member programming receive programming from more than one organization. Connecticut and Maine generally have only a single organization providing programming in any given community (Fig. 10).

Figure 10. Number of NEOSEC Members Serving Spatial Communities by State, showing how many member organizations are working in spatial communities simultaneously.

Nearly half of all spatial communities are served by only one member organization, while ~20% are served by two, ~20% are served by three, and <10% are served by four (Fig. 11). The highest levels of engagement by multiple organizations are in the communities of Providence and Warwick, RI, where all six organizations offer programming.

Figure 11. NEOSEC member organization overlap in spatial communities.

Environmental Justice Populations and Program Coverage

As defined using the Massachusetts state criteria (see page 9), 90 spatial communities in the New England area were identified as environment justice populations.

Minority populations of 25% or higher were the largest single category of environmental justice populations in the region. Most communities with minority populations at or over 25% were in Massachusetts and Connecticut (Fig. 12). Massachusetts had the largest share of communities with populations at or over 25% foreign-born, and Maine had the largest share of households at or below 65% of the Massachusetts state median household income for 2011. Approximately 30% of the spatial communities meet two or more of the environmental justice population criteria.

Figure 12. Environmental justice populations with criteria by state. Starred categories include spatial communities that may meet more than one criteria.

NEOSEC members reached 100% of the identified environmental justice communities in Rhode Island, 90% in Massachusetts, 23% in Maine, and 7% in Connecticut (Figure 13). None of the environmental justice communities in New Hampshire and Vermont were engaged.

	CT	ME	MA	NH	RI	VT
Environmental Justice Spatial Communities Served	2	3	37	0	5	0
Total Environmental Justice Spatial Communities	28	13	41	1	5	2
Percentage	7%	23%	90%	0%	100%	0%

Figure 13. Environmental justice spatial communities reached by participating members; percentages are rounded to the nearest whole number.

Programming

Not all NEOSEC members offered all types of programming (for the full list of programming types see page 13). The most commonly offered programs were offsite day programs, which also reached the greatest number of communities. The least offered programs were high school internships (Fig. 14).

The number of communities participating in different programming types also varied between states. Rhode Island communities participated in an even distribution of program types, while in Massachusetts more than half of all programs were a combination of onsite and offsite day programs. In Maine, approximately half of the programming included a combination of onsite day and public events. In New Hampshire and Vermont, programming was exclusively offsite (Fig. 15).

Figure 14. Number of organizations providing and number of spatial communities participating in programs by type.

Figure 15. Spatial communities participating in program type by state.

Contact Hours

Contact hours were defined as the number of hours a single participant from one community could spend attending one program of a specific type at a specific NEOSEC organization. For example, one person from Boston attending one public event at the Northeastern University Marine Science Center participated in 1-3 hours of programming. The estimated minimum aggregated contact hours are reported here because they are more accurate than the estimated maximum contact hours, due to the open-ended nature of the highest contact hour option on the survey, which was “25 or more” contact hours.

Based on this analysis, the 18 participating NEOSEC members provide approximately 12,004 hours of programming to participating communities. The community with the most contact hours was Newburyport, MA, with an estimated 162 contact hours. Scientist Partnership programs provided the highest number of contact hours, followed by onsite and multiday programs (Fig. 16). Contact hours were also concentrated along the coast and further inland in New Hampshire, and throughout Rhode Island (Figure 17). Contact hours along the Massachusetts coast ranged from 21-40, double that of the 1-10 contact hours estimated for communities further inland (Figure 18).

Figure 16. Contact hours by program type. Contact hours are per-program, aggregated across spatial communities

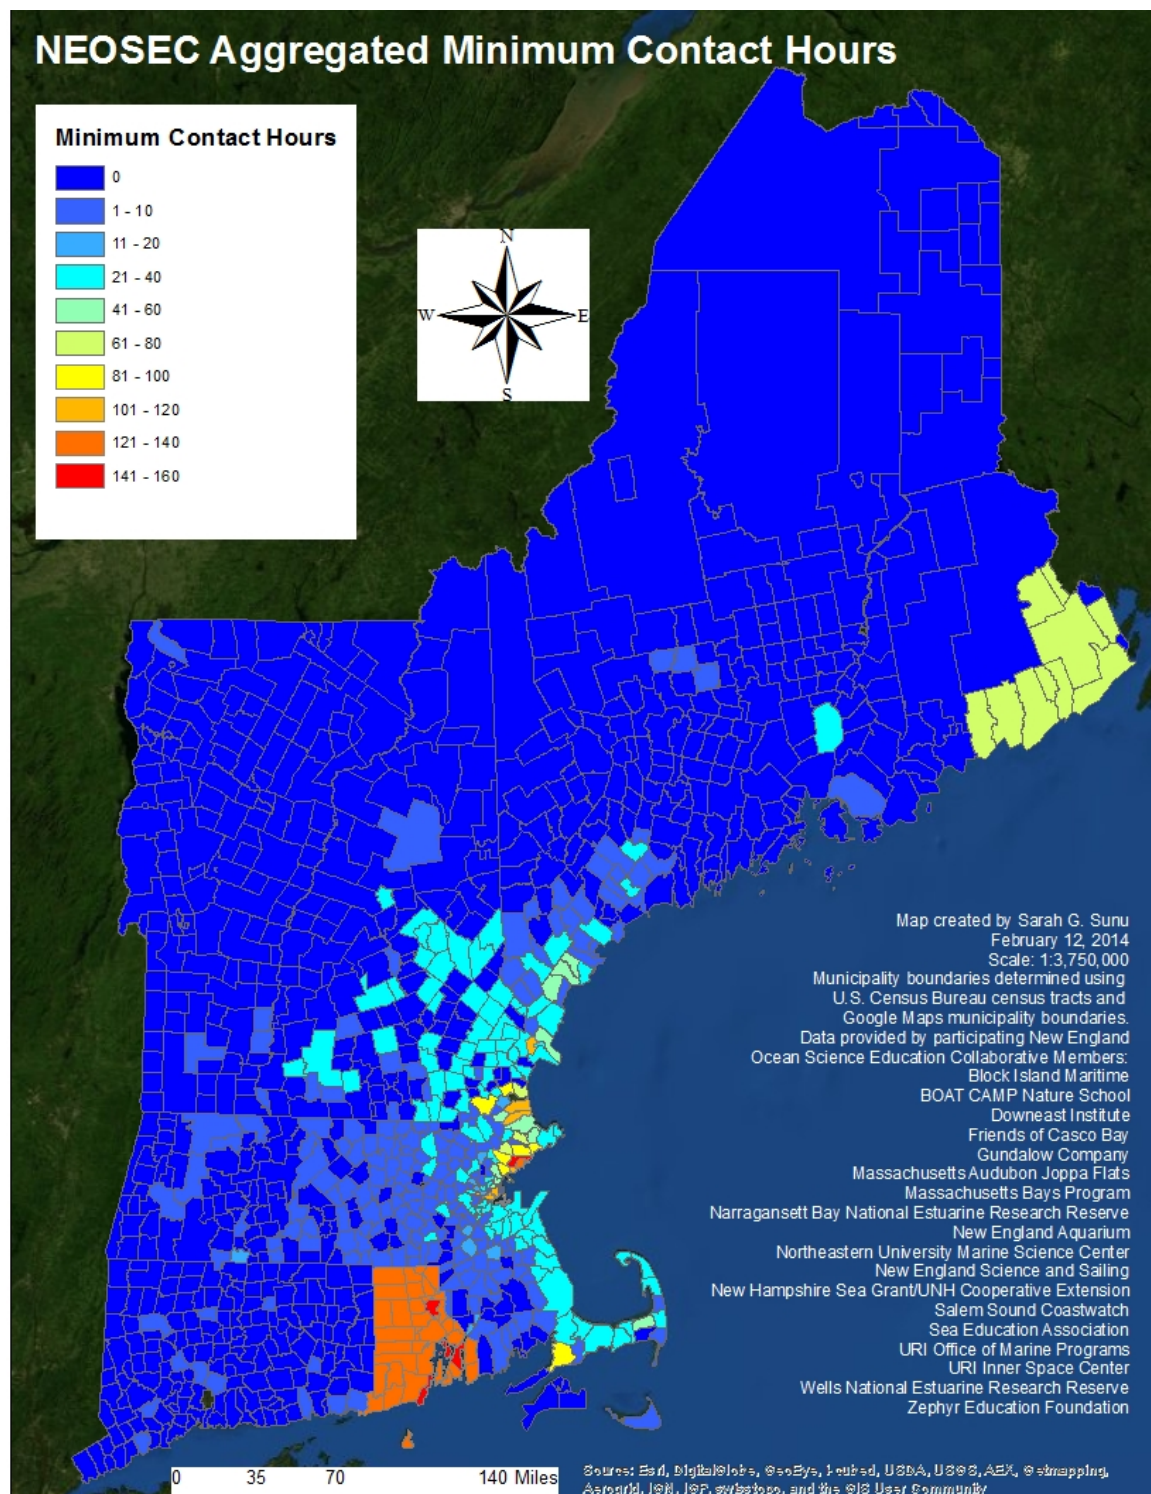

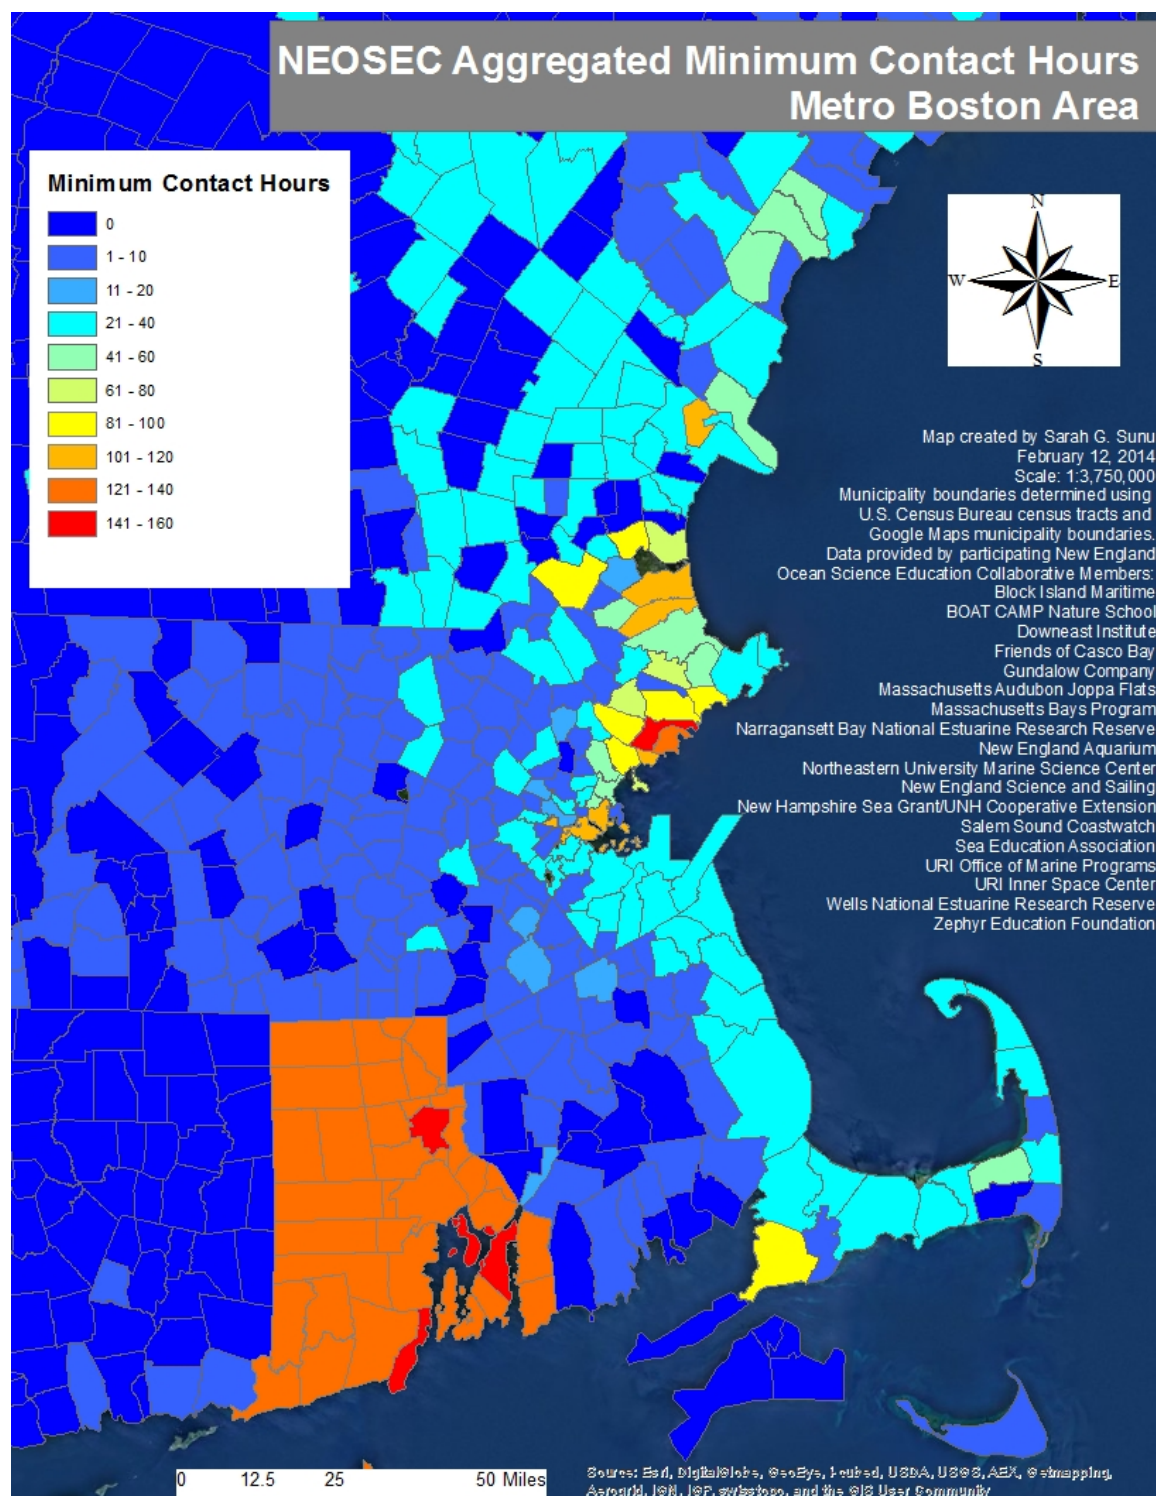

Figure 17. Minimum spatial community contact hour distribution for participating NEOSEC members

Program Expansion Scenarios

An example of how this kind of spatial analysis can inform program management is applied in the following set of program expansion scenarios for the Northeastern University Marine Science Center (NEUMSC) in Nahant, MA. Four types of programming provided by the NEUMSC are included in this map of the Massachusetts North Shore, but a number of communities receive only one type of programming from NEUMSC, largely onsite day programs and multi-day programs (Fig. 19). Between Boston and Salem, many communities participate in multiple program types, but there are still opportunities for expansion, particularly for nearby communities like Swampscott, which currently participates only in offsite programming and public events but their proximity would make attending an onsite day program convenient. Mapping the current reach of NEUMSC allows them to identify new communities for expansion and provides opportunities to deepen their existing relationships by encouraging participating spatial communities to participate in additional types of programs.

Mapping networks of organizations can also provide opportunities for collaboration and outreach to new audiences. NEUMSC, the New England Aquarium, and the Zephyr Education Foundation all serve the North Shore Area of Massachusetts (Fig. 20). Within this region, the New England Aquarium has the broadest distribution, while the NEUMSC focused more on the Boston area and north of Boston, and Zephyr Education Foundation programming is dispersed throughout. Overlap with the New England Aquarium occurs for most of the NEUMSC and Zephyr Education Foundation programming, but there are still spatial communities, such as Stoneham and Wenham, that are not currently receiving programming from any of these organizations.

Comparing the current reach of these three organizations with the results from the Community Selection Tool, we can see that all of the spatial communities with a minority population of 25% or more are currently being served by at least one organization (Fig. 21). However, if an individual organization wished to apply for a Science, Technology, Engineering and Math (STEM) education grant targeting environmental justice communities, this comparison allows them to identify potential communities for

expansion and opportunities to collaborate with other organizations. Other target audiences can be identified in this way as well, such as communities with a high concentration of high school age students (Fig. 22). In this example, Wenham has the highest percentage of high school students but is currently not receiving high school internship programming from participating NEOSEC members.

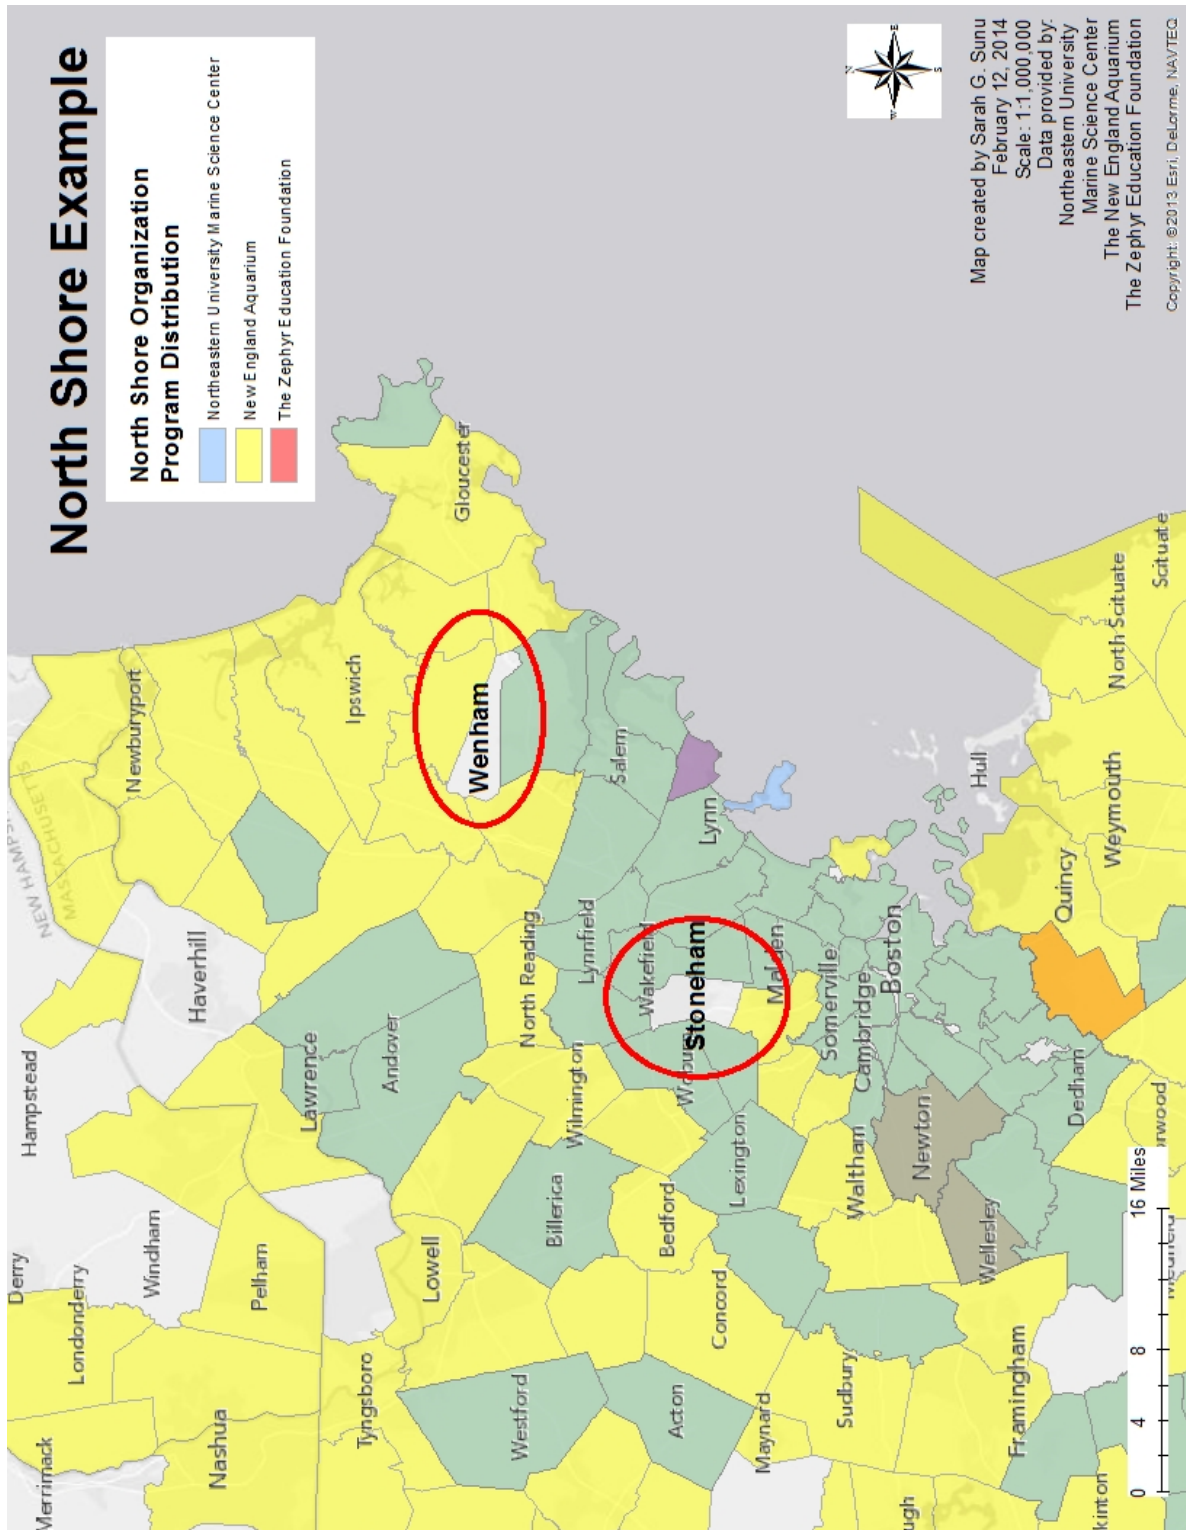

Figure 20. North Shore distribution of spatial communities participating in Northeastern University Marine Science Center programs, New England Aquarium programs, and Zephyr Education Foundation programs.

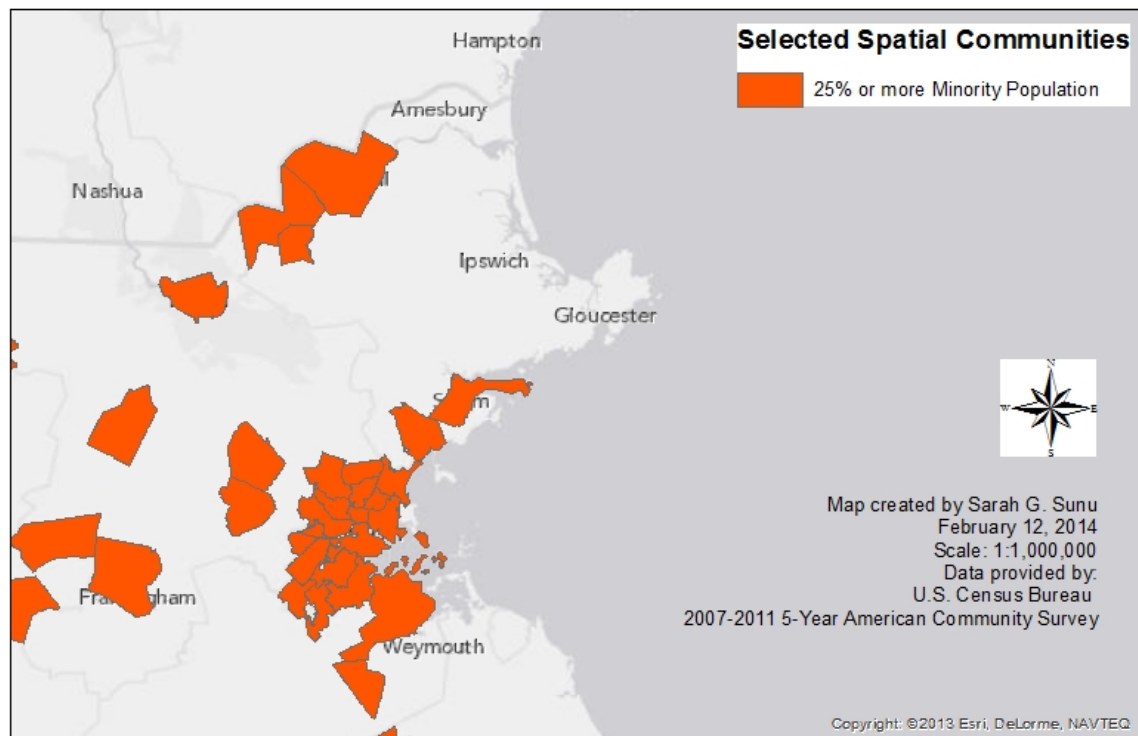

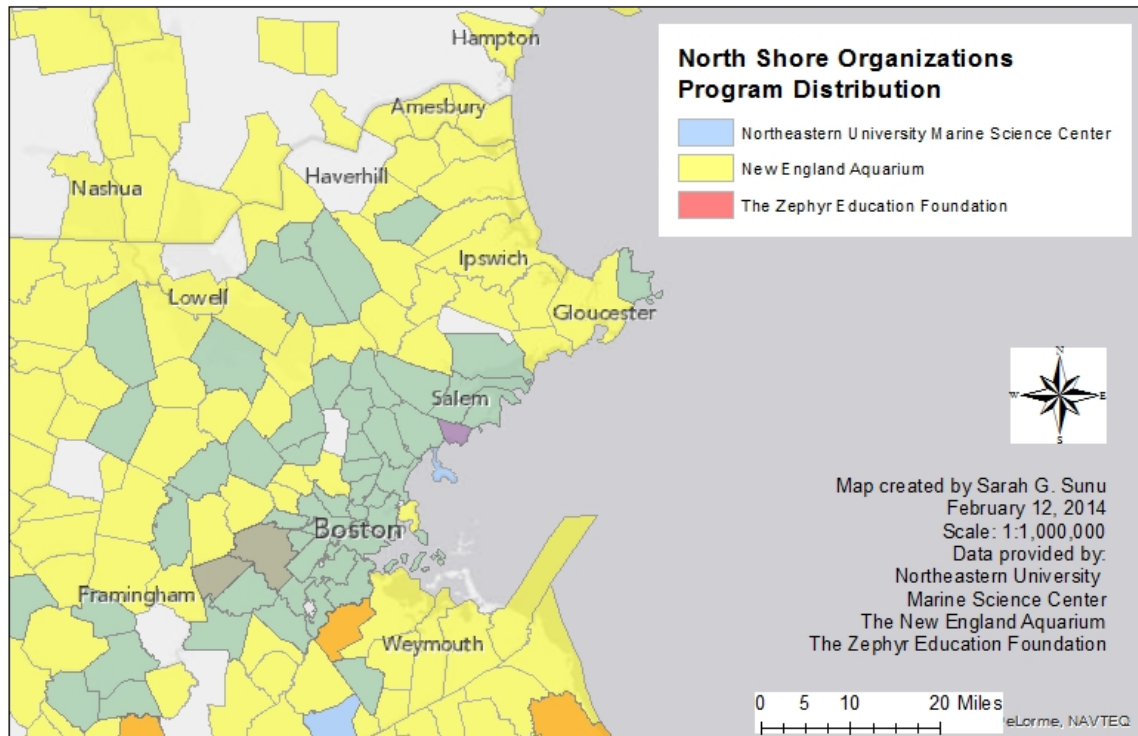

Figure 21. Comparison of North Shore spatial communities receiving programming and communities with minority populations of 25% or higher.

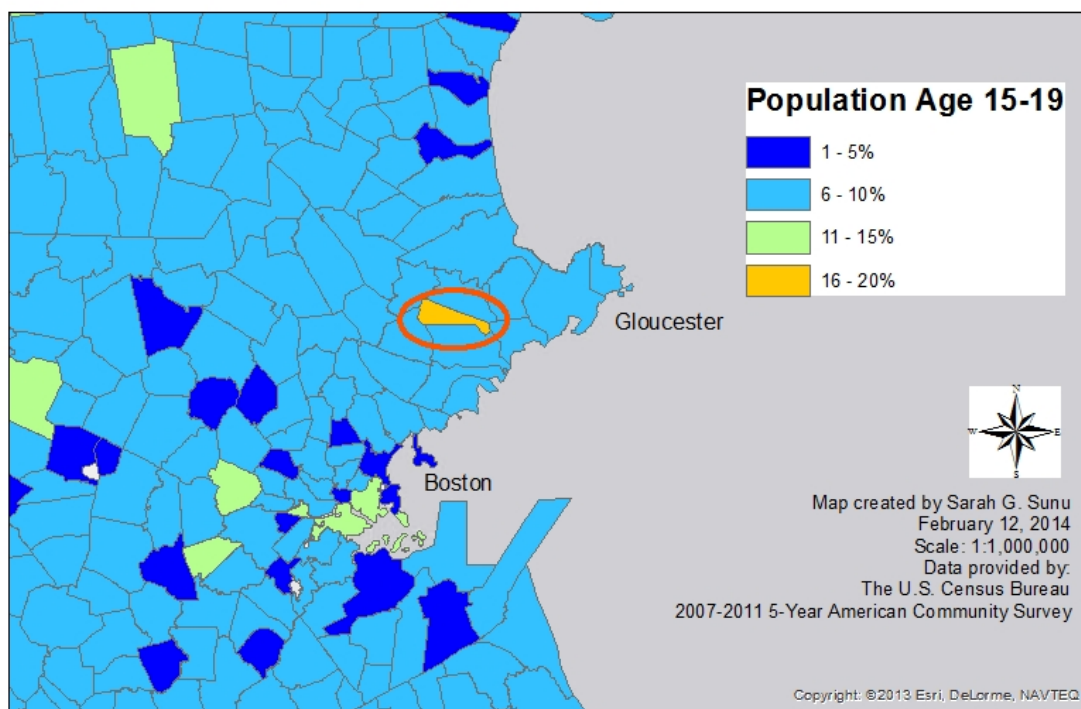

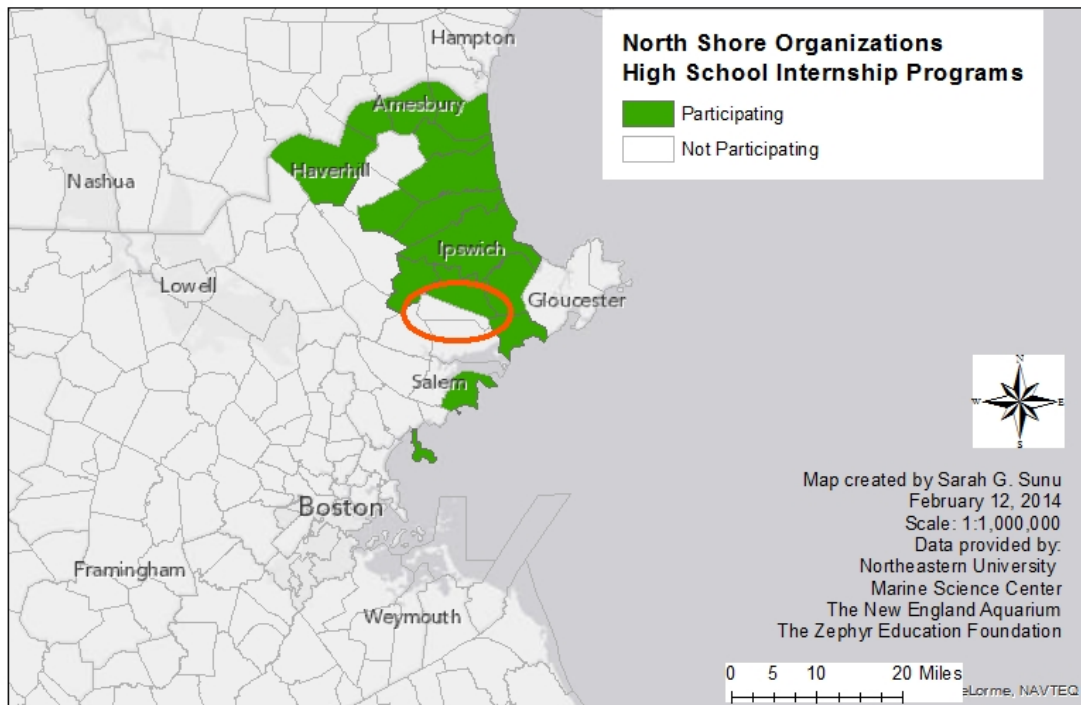

Figure 22. Comparison of where North Shore spatial communities are participating in NEOSEC high school internships, and the distribution of the high-school aged population.

DISCUSSION and RECOMMENDATIONS

Environmental education organizations often operate under resource and staffing limitations, so it is critical that their programs reach intended audiences.

One of the goals of this study was to show the value of mapping as a tool for environmental education organizations. Mapping where and to whom programming is provided can help identify gaps, both in terms of communities reached and in program types that are available. Mapping can also help organizations target their programming to a specific audience and find opportunities to expand and collaborate. In particular, incorporating spatial demographic data into program planning can help environmental education organizations identify environmental justice communities and other audiences that they particularly wish to provide programming to.

Mapping should not be used as a substitute for dialogue with communities when planning program expansion, and new program development must maintain the partnership between communities and environmental education organizations in determining audience and content, but mapping tools can help environmental education organizations start these conversations with communities and provide context for programming discussions.

Documenting the collective spatial reach of members can also be a useful tool for collaborative networks like NEOSEC in demonstrating their own impacts and the benefits of membership. Information on trends within the environmental education community of practice can provide insight into the kinds of support members need and how a convening entity like NEOSEC best fits into the existing landscape.

The following recommendations outline lessons learned from this analysis that can be used to guide NEOSEC members interested in harnessing the power of mapping for their organization.

Incorporate mapping into program development

Mapping and spatial analysis can inform the program development process by providing information on which communities are and are not receiving programming, allowing environmental education organizations to target communities that are not being served (a benefit that particularly interested NEOSEC members in preliminary discussions).

Benefits of mapping for program development can still be realized even when mapping the reach of every environmental education organization in a region may not be feasible; by targeting communities that are not known to currently receive programming, environmental education organizations are increasing their chances of reaching new audiences. Regardless of whether such communities have existing programming, environmental education organizations that take advantage of mapping can further tailor their programs to suit community needs and characteristics, by incorporating community demographic information.

Developing Visual Narratives

Mapping can provide powerful visual narratives for grant writing and fundraising.

Identifying communities that meet target audiences (such as environmental justice populations) for grants, and developing grant proposals in concert with those communities, can strengthen both the persuasiveness of the grant and the proposed program. Future spatial analyses of environmental education reach could also incorporate environmental information layers, such as coastal flooding zones, threatened habitats, and brownfields sites (sites that have been contaminated by hazardous substance spills).

Spatial proximity of programming to these environmental issues can provide a local focus to programs.

Include spatial information in evaluations and data collection

During the data collection process, it became clear that spatial information is not always incorporated into routine data collection at environmental education organizations.

Identifying best practices for collecting data on community participation in programming can improve the quality of data for mapping, and can further inform program development and grant writing. Mapping also has potential as a program evaluation tool, particularly when success of an environmental education program is measured through

actions taken to protect the environment, which are often spatial in nature, such as preserving a habitat, cleaning a dump site, or establishing a recycling program, and other mappable outcomes.

Establishing a consistent means of estimating contact hours would also help inform evaluation, particularly in terms of depth of programming. Currently, there are many ways to estimate and map contact hours, from the method outlined in this analysis to more data-intensive means, such as cumulative total hours for all participants in all programming. This latter approach would require tracking each individual to determine the number of contact hours experienced. Defining best practices that are comprehensive enough to provide accurate contact hour data, but that are also feasible for organizations to put into practice, would further enhance the value of mapping contact hours within communities, and provide an additional method of program evaluation.

Increase the participation of environmental education organizations

While mapping can be a valuable tool for management for environmental education organizations, the value of mapping the reach of environmental education organizations within a region or network increases with higher levels of participation. Organizations like NEOSEC provide a critical central point for this kind of information gathering, and they are well positioned to encourage their members to participate in spatial analyses. Environmental education networks should consider performing spatial analyses with their member organizations as part of routine management processes; their position as convening bodies allows them to reach across governmental, institutional, and ideological boundaries.

Develop partnerships with organizations that have GIS capabilities

Currently, GIS software is often prohibitively expensive for many local environmental education organizations, preventing them from using GIS as a management tool. Partnering with academic institutions or other organizations with GIS software and skilled users can provide access to GIS information for organizations that would otherwise not be able to afford it and allow the type of analysis demonstrated here.

Conclusion

This analysis demonstrates the importance of collecting and mapping data on community participation in environmental education programs. Mapping tools such as those developed for this analysis allow organizations to identify communities for expansion and opportunities for collaboration, and can also help organizations locate target audiences such as environmental justice communities. While this study was limited in scope and scale, it shows the value of mapping to inform and support environmental education organizations as they seek out new audiences, write targeted grant proposals, and identify new partners for collaboration.

APPENDIX I: ArcGIS Online Mapping Application Instructions

To use the ArcGIS Online (AGOL) Mapping Applications created as a part of this project, please follow the instructions below.

1. Getting Started

On a computer with a current operating system, open an appropriate, updated web browser.

Mac OS supports the latest versions of the following web browsers for AGOL: Firefox, Google Chrome, and Safari.

Windows OS supports the latest versions of the following web browsers for AGOL: Firefox, Google Chrome, and Internet Explorer 9, 10, and 11.

Mobile devices may also be used to access AGOL. iOS devices may use Safari, and Android devices may use Google Chrome or the default Android browser.

2. Open a Map

Navigate to one of the mapping applications using the links below:

Mapping the Gaps: Using GIS to Target Environmental Education Efforts Tool:

The Mapping the Gaps Tool allows the user to compare the combined NEOSEC member data with community demographics using a swipe template (instructions for the Mapping the Gaps Tool can be found in section 3).

<https://dukeuniv.maps.arcgis.com/apps/StorytellingSwipe/index.html?appid=da50e1f278af4ad995897e9cb360e257&webmap=65ded3bab1734c48bdd50066cca65218#>

Community Selection Tool:

The Community Selection Tool allows the user to identify communities of interest using specific demographic characteristics (instructions for the Community Selection Tool can be found in section 4).

<https://dukeuniv.maps.arcgis.com/apps/Filter/index.html?appid=aa86919709924c31a1b4bed9d9a420dc>

NEOSEC Member Reach Tool

The NEOSEC Member Reach Tool shows the reach of each participating member as an individual layer, allowing the user to turn layers on and off and identify which members are working in which communities (instructions for the NEOSEC Member Reach Tool can be found in section 5).

<https://dukeuniv.maps.arcgis.com/apps/OnePane/basicviewer/index.html?appid=2e39a29c338c483ea884ff12b7a0b325>

Northeastern University Marine Science Center (NEUMSC) Programs Tool

The NEUMSC Programs Tool shows which communities participate in the different types of programming offered by the NEUMSC, as an example of how an individual organization could utilize a mapping tool. The user can turn layers on and off to identify which programs are being offered (instructions for the NEUMSC Programs Tool can be found in section 6).

<https://dukeuniv.maps.arcgis.com/apps/OnePane/basicviewer/index.html?appid=121901a42c7049b3b7f027e05139be62>

All of the map applications have basic user tools, such as zoom in and out. The Community Selection Tool, the NEOSEC Member Reach Tool, and the NEUMSC Programs Tool all have a city search bar (the map will zoom in on the location of the city that was searched) and a location button (grey with white circle below the zoom buttons), which zooms in on the location of the device currently being used to look at the map (Fig. A; note that location services have to be enabled).

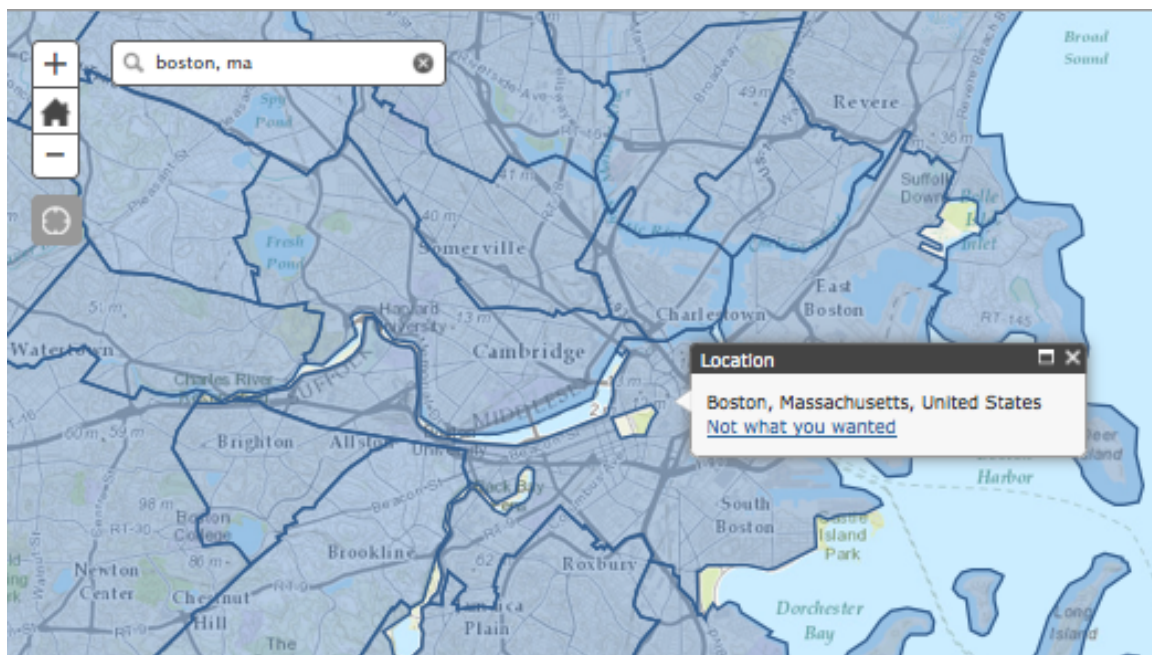

Figure A. Basic navigation tools in each map application.

Both the NEOSEC Member Reach Tool and the NEUMSC Programs Tool also have a toolbar that allows the user to print the map, turn layers on and off, change the basemap appearance, measure distance from one point to another, or share the map via email, Facebook, or Twitter (Fig. B).

Clicking on one of the communities in the left-hand map (here Nantucket is selected) will open a green-bar pop-up with information on which of the 18 participating NEOSEC members offer programming there (organizations with programs in that community will have a “YES” next to their organization name) (Fig. D).

Scrolling down in the pop-up will provide additional information; organizations are listed in the top section of the pop-up, and if the user wants to know the type of program that the organization is offering, they can scroll through the list until they find the organization of interest. Organizations and the programs they offer are arranged alphabetically.

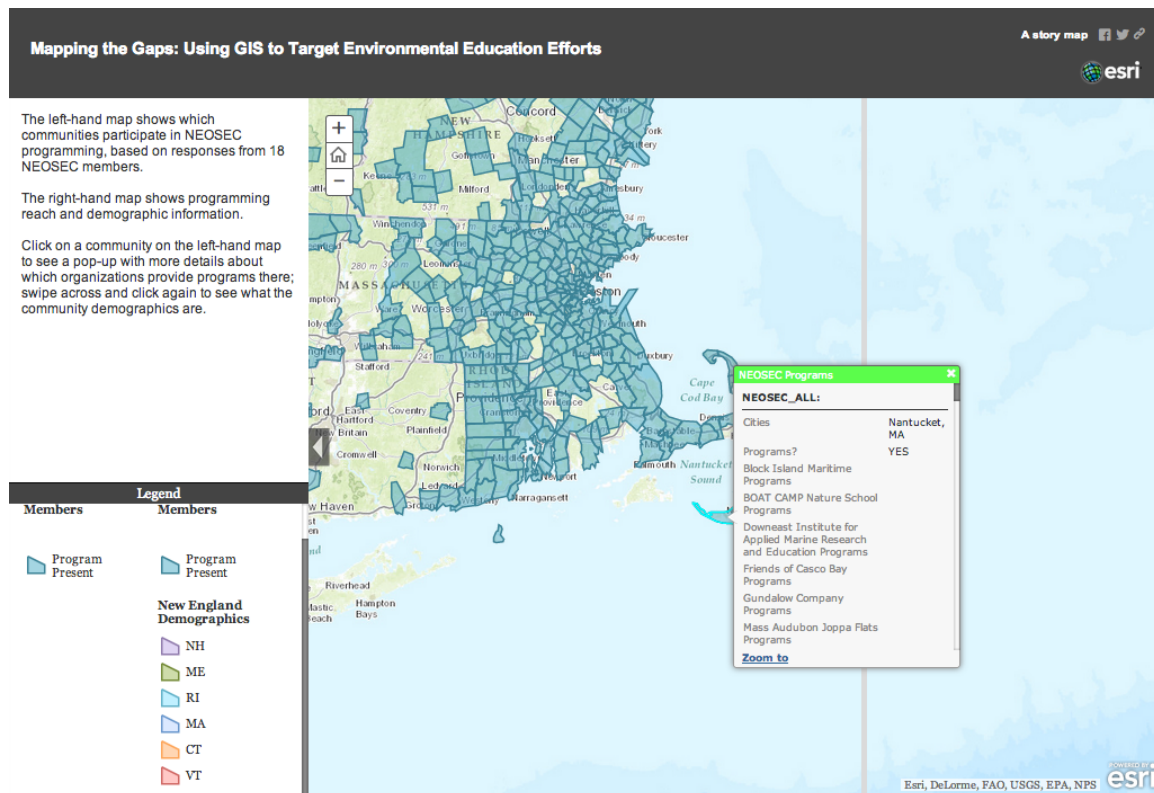

Figure D. Example of left-map pop-up with information on the organizations and type of programming offered in Nantucket.

Clicking on a community on the right-hand map (Nantucket is again selected) will yield a blue-bar pop-up that contains community demographic information (Fig. E). If you select a community on the left and open the pop-up to see the program offerings, and then swipe across, the pop-up window will change to the community demographics (and vice versa if you swipe from left to right).

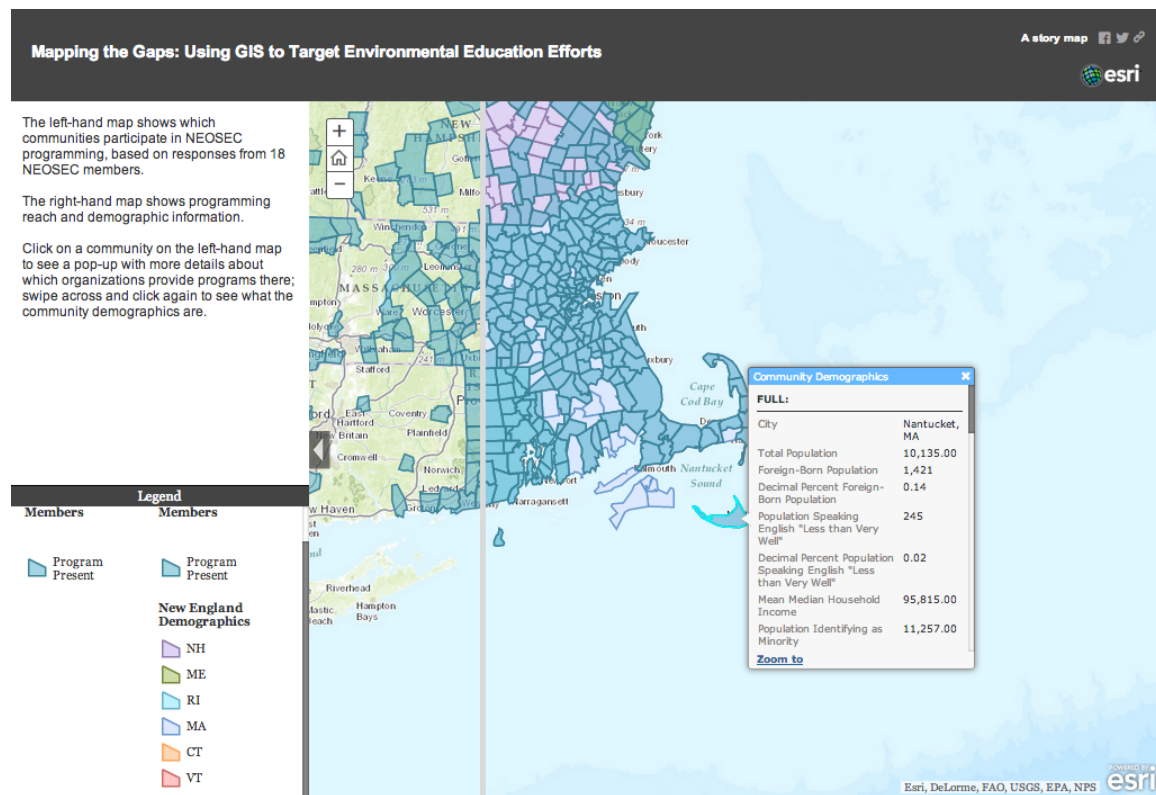

Figure E. Nantucket community demographics pop-up

4. Using the Community Selection Tool

When the Community Selection Tool map opens, it will display the six New England states in different colors, with a panel on the left that allows the user to filter for communities that meet their criteria (Fig. F).

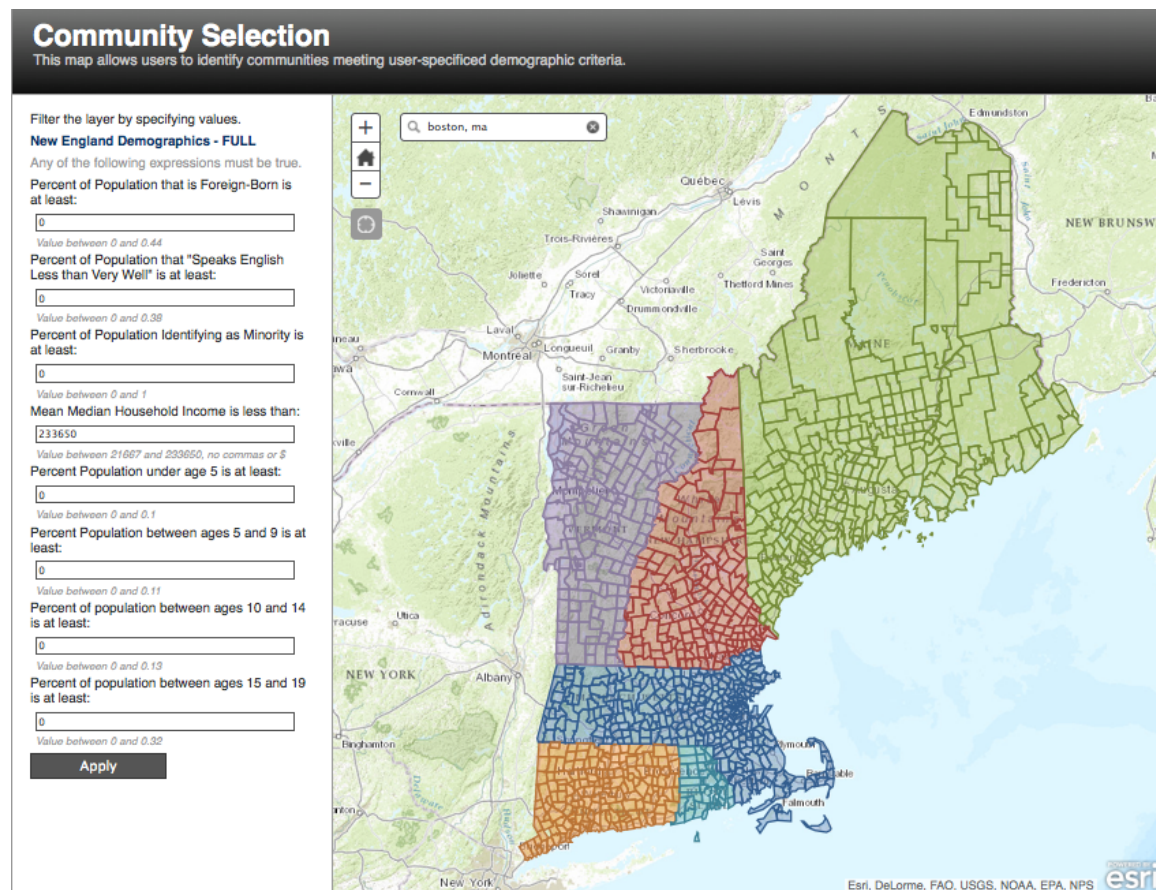

Figure F. Community Selection Tool interface.

The filters are currently set to defaults that will return all communities, but the user can specify levels that interest them. So for example, if you are interested in finding all the communities where 25% or more of the population identify as a minority, you would type 0.25 into the third box (Fig. G). Prompts are provided for each category, and hints indicating the existing range are provided under the user input boxes, to help users avoid empty returns because no communities meet their criteria.

However, empty returns are still possible because the tool will only return communities that meet ALL of the user-specified criteria. So if more than one criteria is used and no communities meet all of the criteria, no communities will be returned.

Filter the layer by specifying values.

New England Demographics - FULL

Any of the following expressions must be true.

Percent of Population that is Foreign-Born is at least:

Value between 0 and 0.44

Percent of Population that "Speaks English Less than Very Well" is at least:

Value between 0 and 0.38

Percent of Population Identifying as Minority is at least:

Value between 0 and 1

Mean Median Household Income is less than:

Value between 21687 and 233650, no commas or \$

Percent Population under age 5 is at least:

Value between 0 and 0.1

Percent Population between ages 5 and 9 is at least:

Value between 0 and 0.11

Percent of population between ages 10 and 14 is at least:

Value between 0 and 0.13

Percent of population between ages 15 and 19 is at least:

Value between 0 and 0.32

Apply

Figure G. Example of user-selected menu criteria. Here the user is looking for communities with a minority population of 25% (0.25) or more.

The tool will return all communities meeting the user-specified criteria (Fig H). All percentages need to be entered as decimal percents, and the mean median household income must be entered without dollar signs or commas. Please also note that unlike the other categories, mean median household income returns communities that are at or BELOW the specified level (i.e., it returns all communities where the mean median household income is \$100,000 or less).

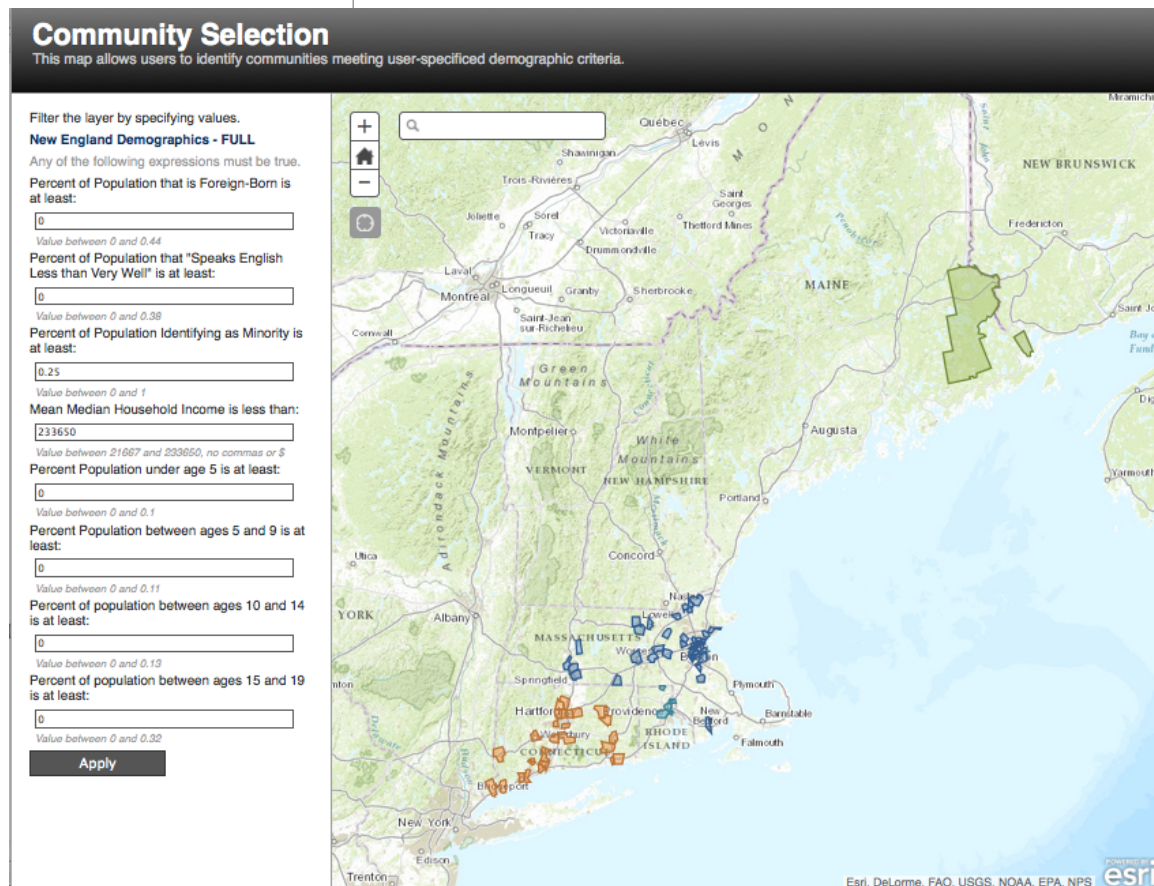

Figure H. Community Selection filter results for 25% or higher minority population.

For more information about a specific community, click on the polygon of interest and a pop-up with more information will open on the screen (Fig. I). Scroll down within the pop-up to find a variety of demographic information, including languages spoken and population enrolled in school.

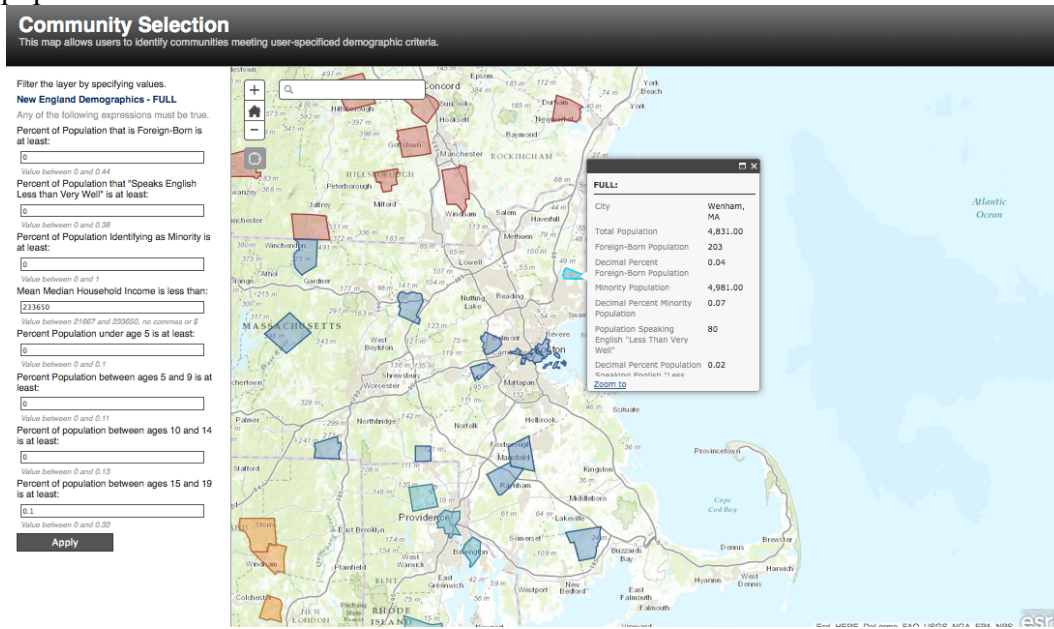

Figure I. Results of a search for communities where 10% or more of the population is between ages 15-19, with pop-up information.

5. Using the NEOSEC Member Reach Tool

When the NEOSEC Member Reach Tool opens, it will display 19 layers in the legend and map—one New England Demographics layer, and eighteen NEOSEC member organization layers (Fig. J). Scroll down in the legend to see all of the NEOSEC member organizations.

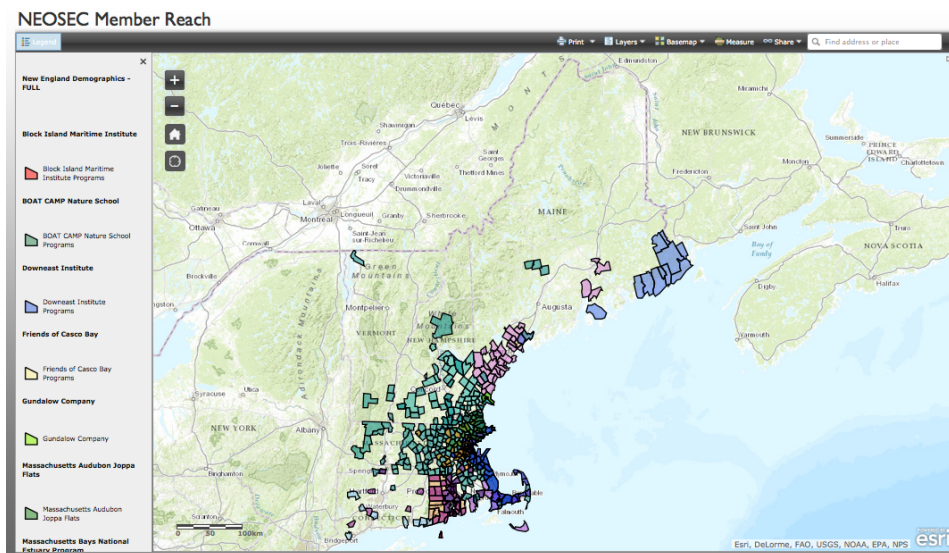

Figure J. Display of the 18 participating NEOSEC member organizations on separate layers.

Layers can be turned on and off to compare the reach of different organizations and see areas of overlap. To remove layers, click on the ‘Layers’ tab in the upper right tool bar. A drop-down menu will appear, and you can uncheck the layers that you do not wish to view (Fig. K).

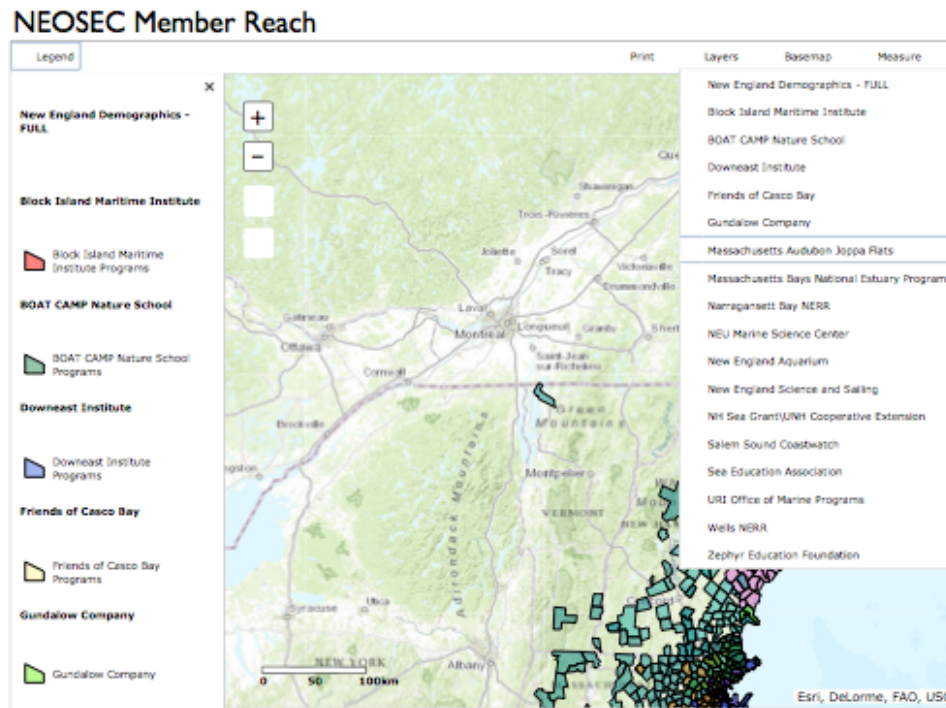

Figure K. Using the Layers drop-down to remove layers. This image is slightly different due to difficulties taking a screenshot with the Layers drop-down open, but the general sense is the same—in the app itself there will be checkboxes by each layer.

Clicking on a community will open a pop-up window; however there is a glitch in the pop-up window for this app, causing it to show that there are multiple windows available which can be viewed by clicking on the arrows in the pop-up window top bar. When the arrows are clicked, the selected community moves independently, causing the pop-up window to display information for a different community.

This glitch can be avoided by removing all layers except those of particular interest, if the user wishes to identify the specific program type that an organization is offering in the community. The Northeastern University Marine Science Center (NEUMSC) is used as an example here (Fig. L), where clicking on a community that the NEUMSC operates in shows that they have a Multi-Day program there.

The numbers next to program types in the pop-up indicate the contact hour range for that programming type at that organization, based on the information the organization provided in the survey.

NEOSEC Member Reach

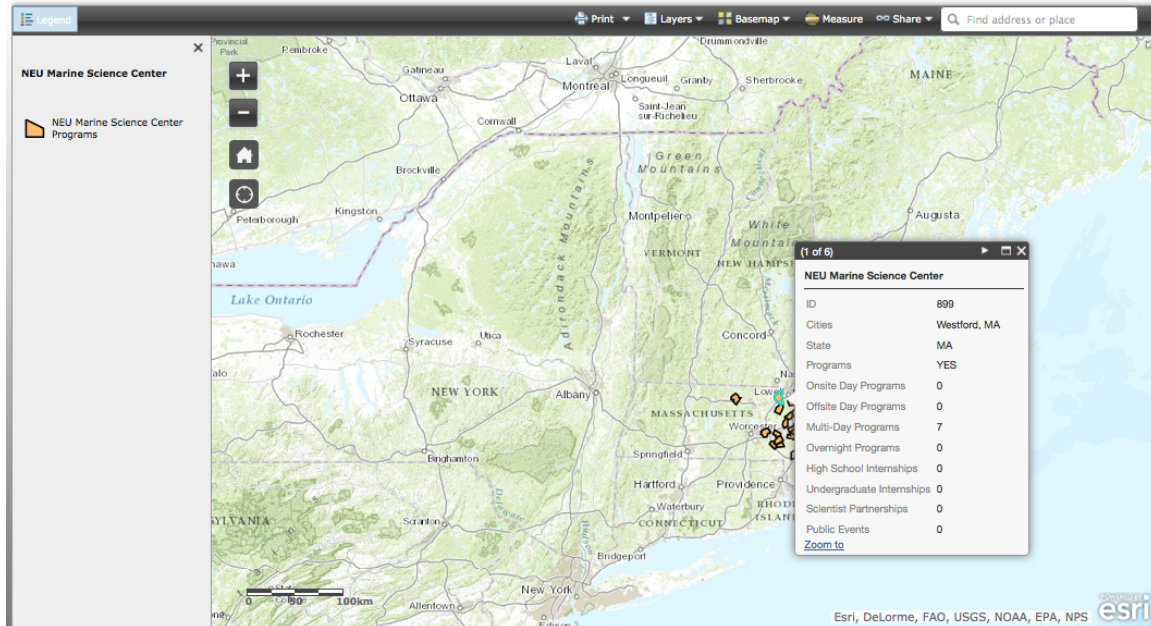

Figure L. NEUMSC example of pop-up information in the NEOSEC Member Reach Tool.

Results can be interpreted for contact hours as follows:

- 1: <1 hour
- 2: 1-3 hours
- 3: 3-5 hours
- 4: 5-10 hours
- 5: 10-15 hours
- 6: 15-25 hours
- 7: >25 hours

So in this example, Westford participates in a Multi-Day program at the NEUMSC that provides >25 contact hours.

Clicking on the 'Print' button on the top bar yields a printable PDF of the map as you currently see it (so any layers that have been removed will not appear on the map). A community may be selected (will appear with a blue outline) but pop-ups will not print.

6. Using the NEUMSC Programs Tool

When the NEUMSC Programs Tool opens, it will display eight layers—one New England demographic layer and seven NEUMSC layers (one for each program type) (Fig. M).

Similar to the NEOSEC Member Reach Tool, the NEUMSC Programs Tool allows the user to turn off layers by unchecking boxes in the drop-down under the Layers tab (Fig. N).

NEUMSC Programs

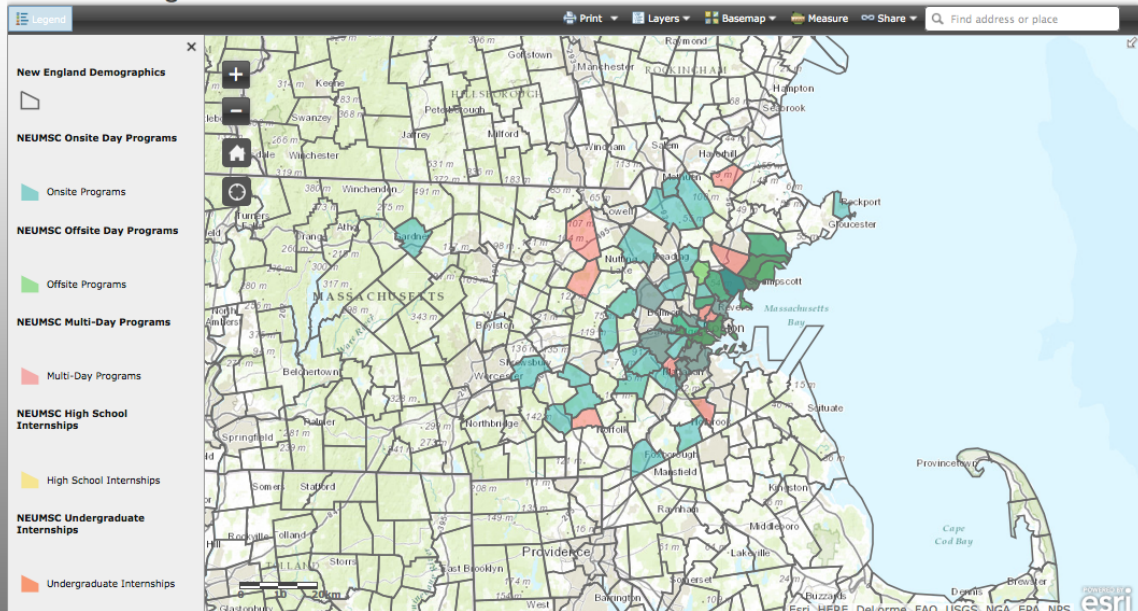

Figure M. NEUMSC Programs Tool, showing program type distribution.

NEUMSC Programs

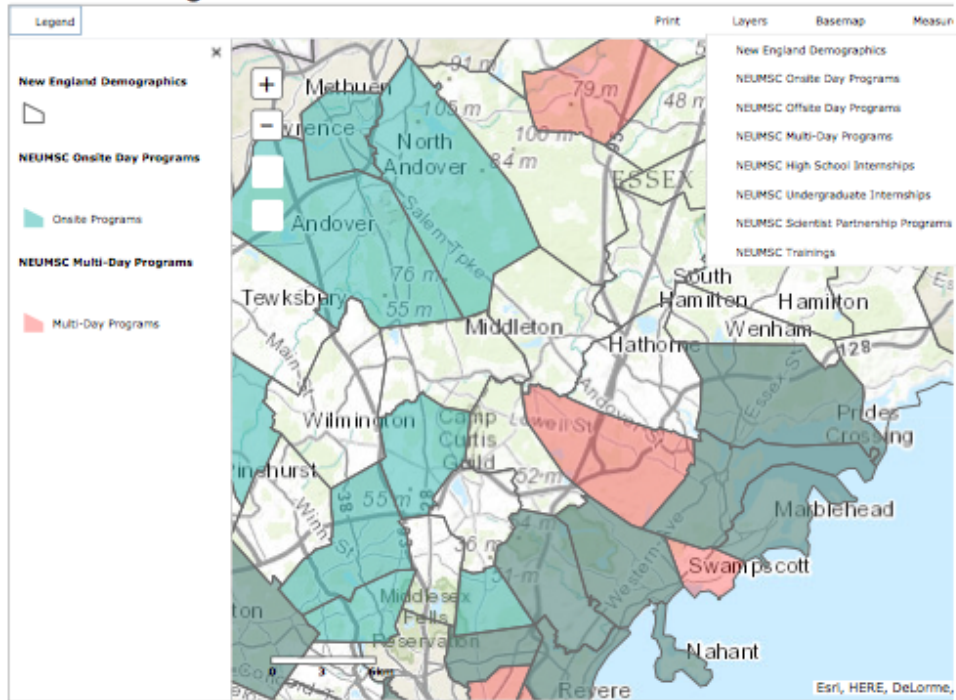

Figure N. NEUMSC Programs Tool, showing the drop-down Layers menu and two program layers.

As with the other map types, clicking on a community will open a pop-up window with additional information (it may be necessary to click through the pop-up window to reach the New England Demographics information)(Fig. O).

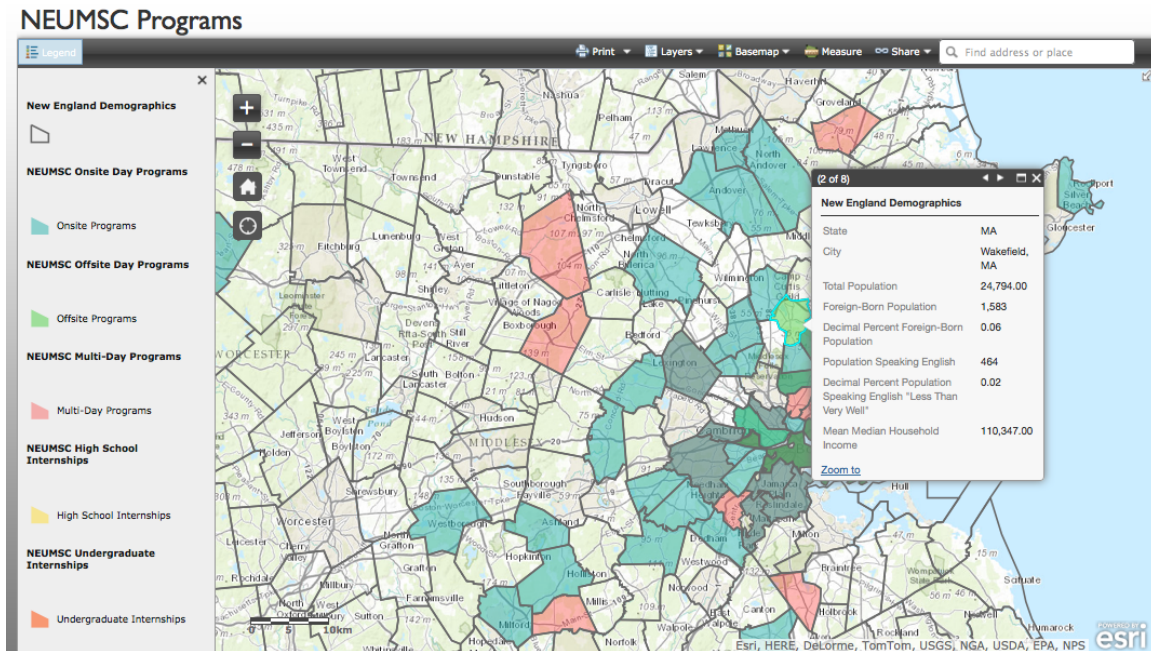

Figure O. NEUMSC Programs with pop-up window.

APPENDIX II: ArcMap Tool Instructions

1. Open the NEOSEC Mapping Tool Map in ArcMap

When you open the tool you will see the six New England states subdivided into spatial communities (the New England Demographic Data layer in the Table of Contents) (Fig. P).

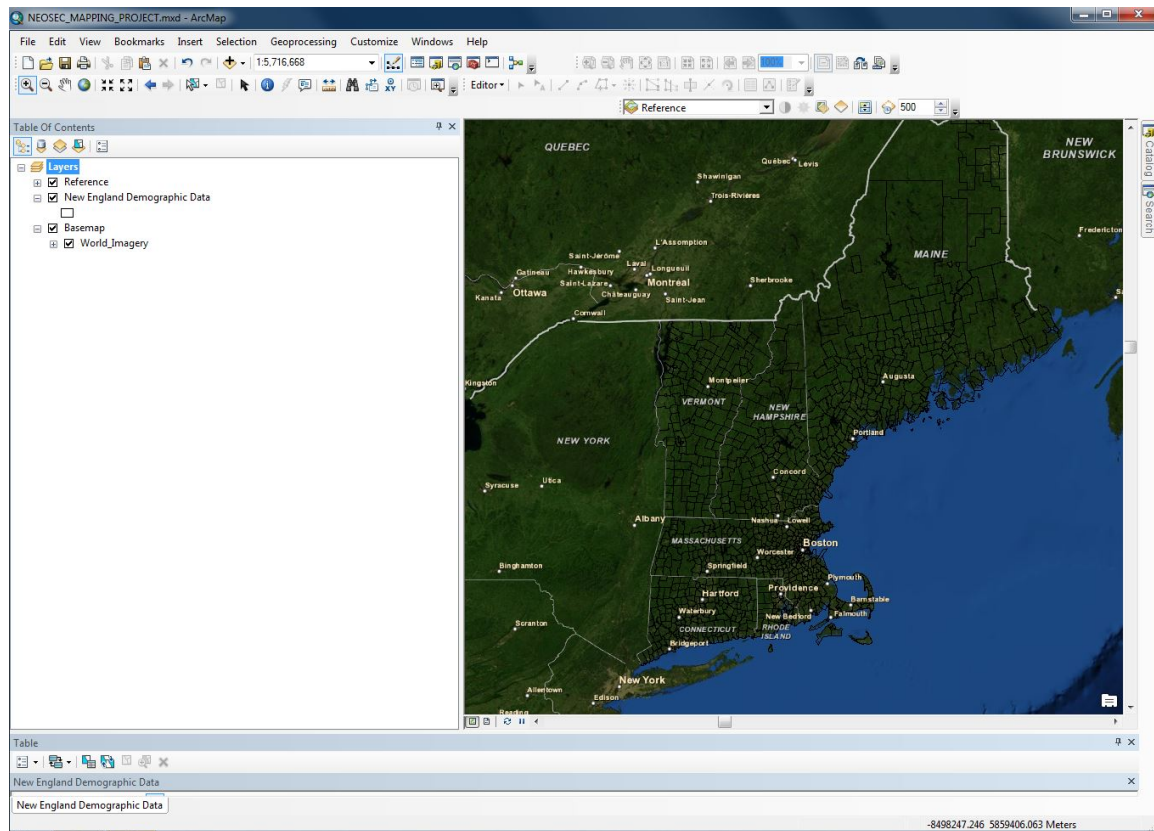

Figure P. NEOSEC Mapping Tool Map appearance upon opening.

2. Navigate to the Community Selection Tool

The Community Selection Tool is within the NEOSEC_MAPPING_PROJECT folder, within the Catalog. A Data folder (containing the NEOSEC and New England data layers), a Documents folder (Docs), a Scratch folder, and a Scripts folder are also within the NEOSEC_MAPPING_PROJECT folder.

The Community Selection Tool model is within the Community Selection Tool toolbox. Click on the plus sign next to the toolbox to show the Community Selection Tool (Fig. Q).

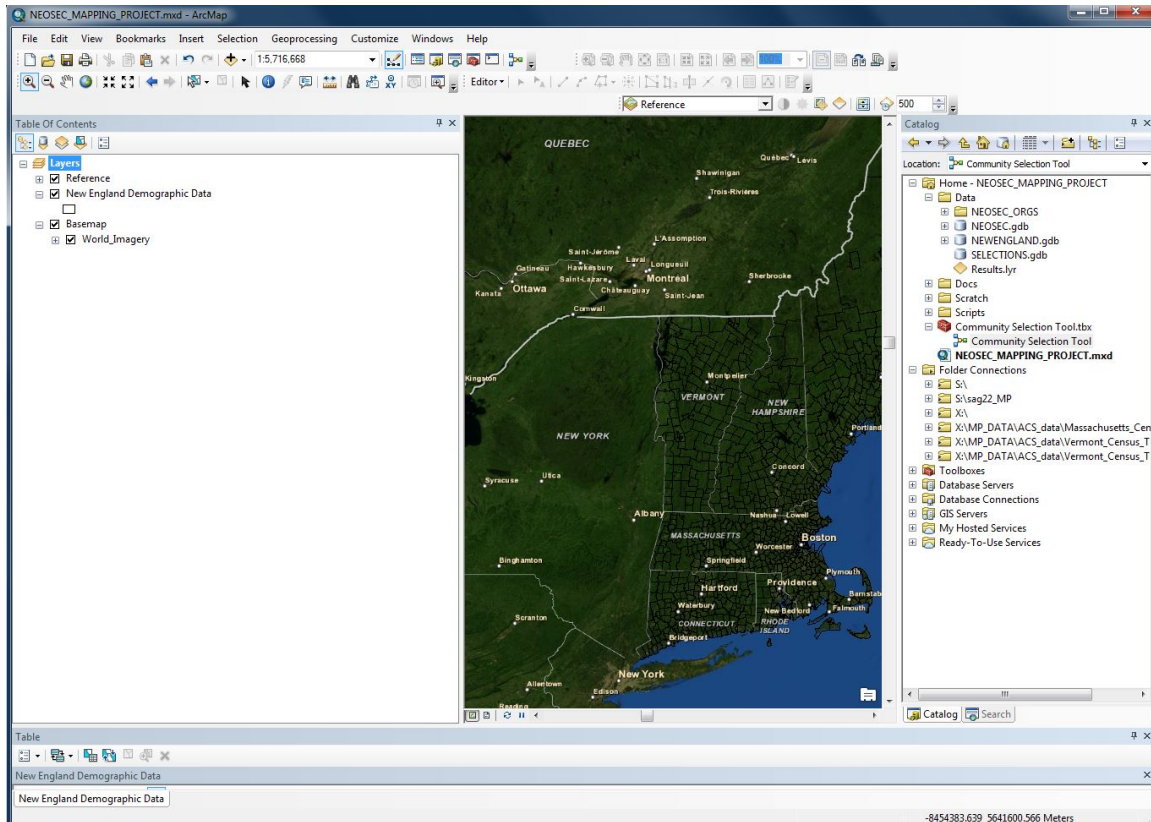

Figure Q. Navigating to the Community Selection Tool in the Catalog.

3. Open the Community Selection Tool

Right-click on the Community Selection Tool model to reveal a drop-down menu, and select 'Open' (alternatively you can double-click the Community Selection Tool model and it will open the tool) (Fig. R). A window will open with the Community Selection Tool.

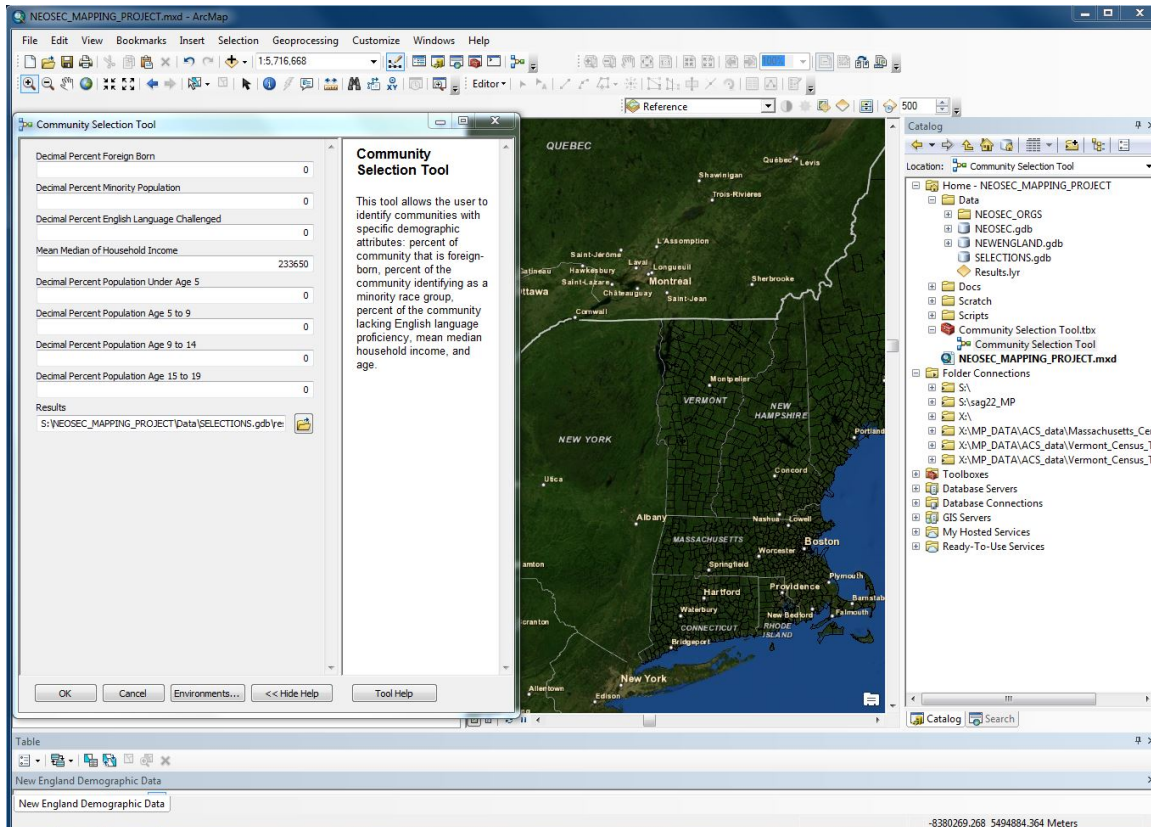

Figure R. Opening the Community Selection Tool. Note the Help section on the right; if this is not open when the window opens, click on ‘Show Help’ on the bottom right of the tool window.

4. Using the Community Selection Tool

To use the Community Selection Tool, fill out criteria of interest in the Community Selection Tool categories (Fig. S). Additional information about each criteria is provided in the Tool Help window to the right of the tool interface, including thresholds for each criteria; it is important to note that there may not be any communities that meet all of the user input criteria (this becomes more likely as the user specifies higher percentages in more of the criteria, such as 0.3 Foreign-Born, 0.55 Minority, 0.2 English Language Challenged, Mean Median Household income of \$30,000 or less, etc), in which case the tool will return a null feature class. The user also specifies the name of the new feature class within the tool; output from the tool is set to default to the SELECTIONS geodatabase within the Data folder in the NEOSEC_MAPPING_PROJECT folder.

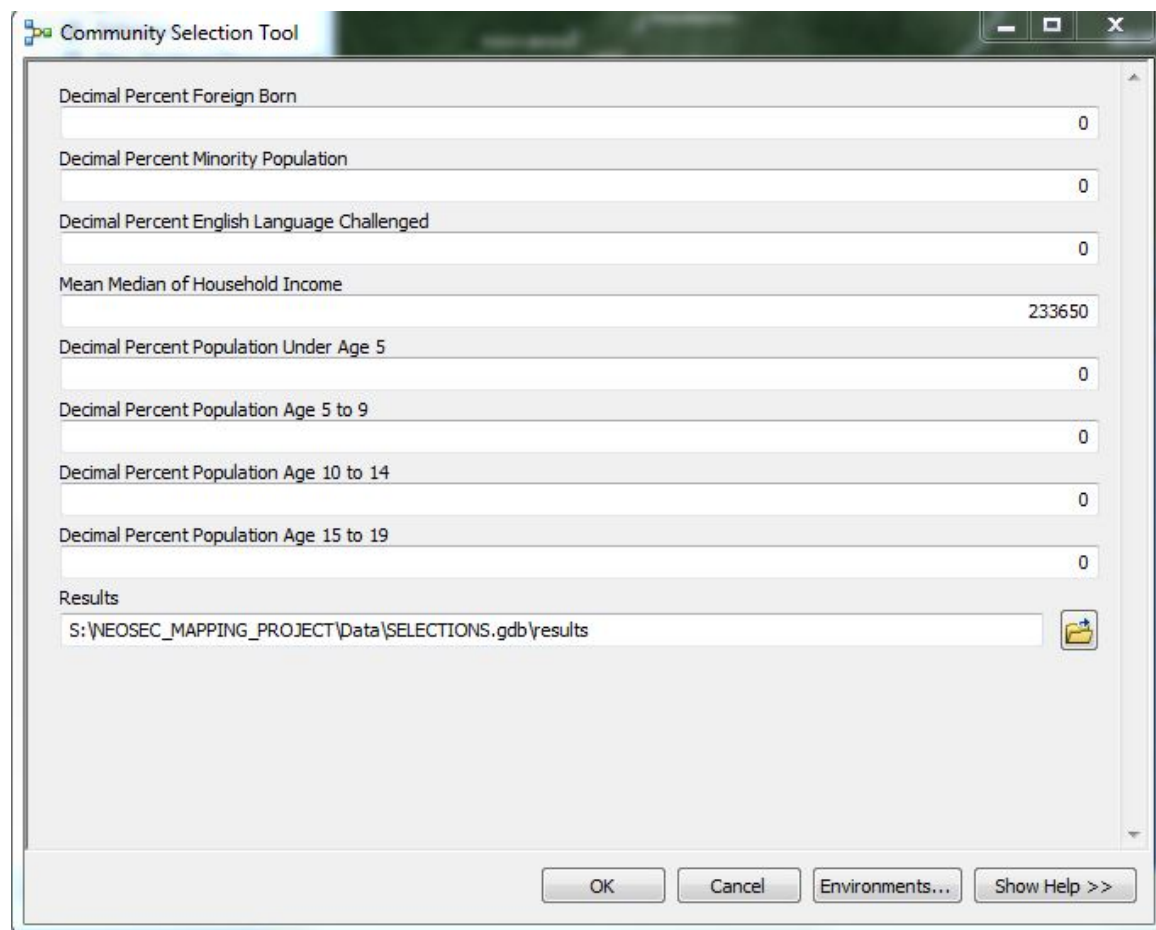

Figure S. Community Selection Tool User Interface.

5. Results from the Community Selection Tool

Results from the Community Selection Tool will appear in orange on the map, with the user-selected file name in the Table of Contents (Fig. T). This example shows the results of running the tool set to communities with 5% (0.05) or more Foreign-Born population and 25% (0.25) or more Minority population.

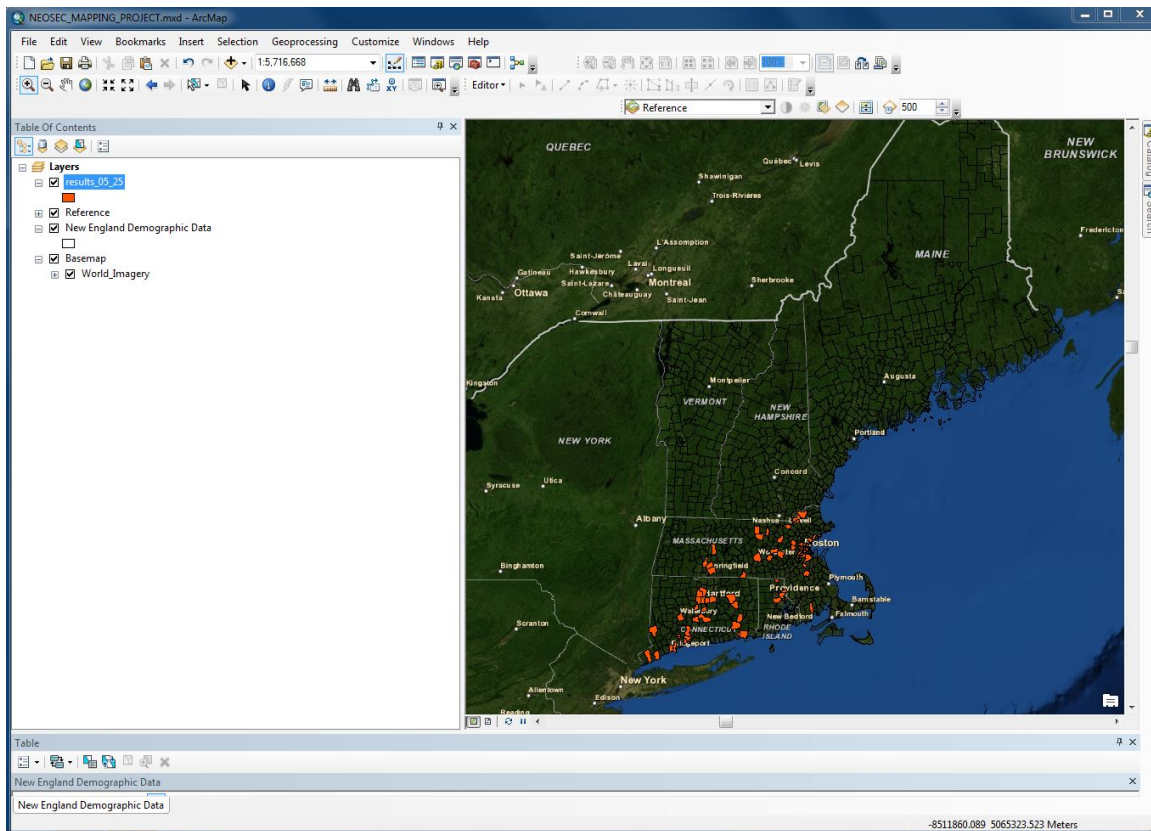

Figure T. Example results from Community Selection Tool; communities that meet or exceed the user-specified criteria are in orange.

Additional demographic information on communities identified with the tool can be accessed using the Identify tool (the blue circle with the white i in the ArcMap toolbar). Clicking on a community while the Identify tool is engaged opens a window that displays additional information about the community such as languages spoken, race, and age (Fig. U). Definitions of the field names are provided in Fig. V.

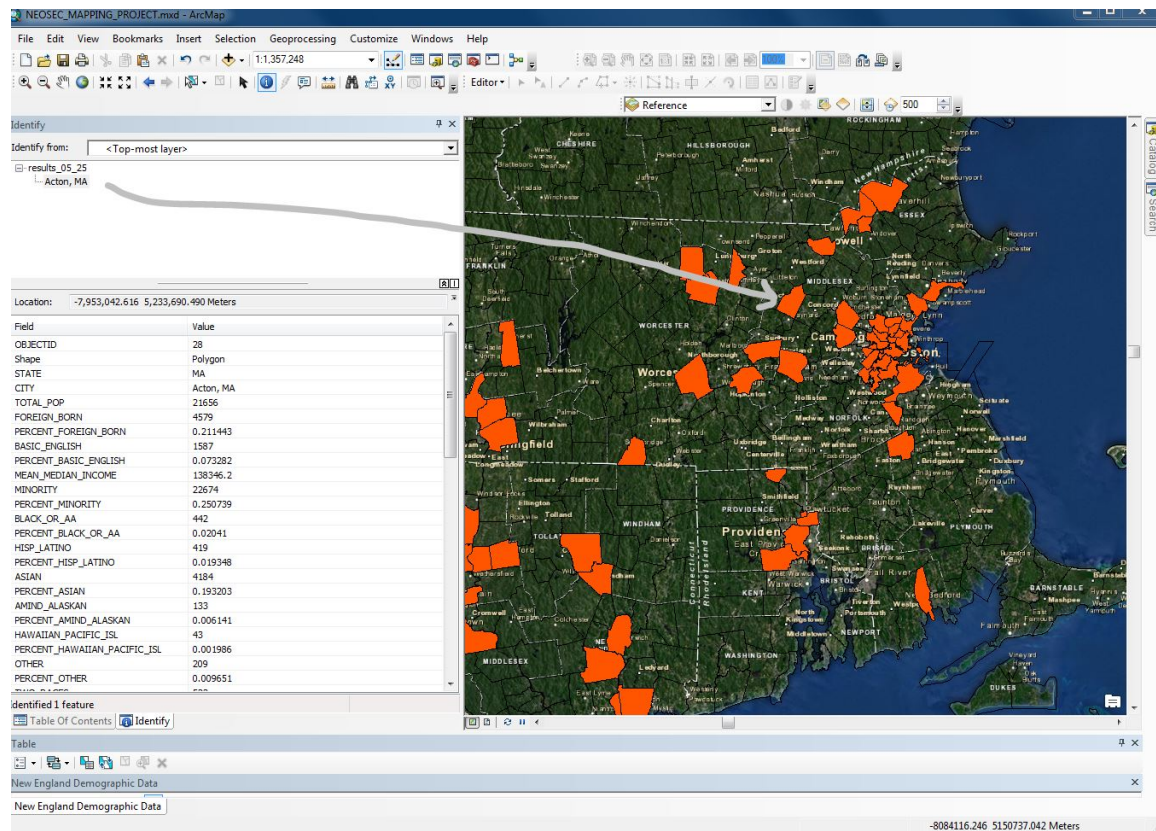

Figure U. Using the Identify tool for additional information about communities.

Field Name	Description	Calculated, or corresponds to aggregated data from which field in U.S. Census Bureau 2007-2011 5-Year American Community Survey?
STATE	State	Calculated
CITY	City	Calculated
TOTAL_POP	Total Population	DP5_HC01_VC03
FOREIGN_BORN	Foreign Born Population	DP2_HC01_VC134
PERCENT_FOREIGN_BORN	Decimal Percent Foreign Born Population	Calculated
BASIC_ENGLISH	Population Speaking English "Less Than Very Well"	DP2_HC01_VC170
PERCENT_BASIC_ENGLISH	Decimal Percent Population Speaking English "Less Than Very Well"	Calculated
MEAN_MEDIAN_INCOME	Mean Median Household Income	DP3_HC01_VC112
MINORITY	Population Identifying as Minority	Calculated
PERCENT_MINORITY	Decimal Percent Population Identifying as Minority	Calculated
BLACK_OR_AA	Population Identifying as Black or African-American	DP5_HC01_VC73
PERCENT_BLACK_OR_AA	Decimal Percent Population Identifying as Black or African-American	Calculated
HISP_LATINO	Population Identifying as Hispanic or Latino	DP5_HC01_VC82
PERCENT_HISP_LATINO	Decimal Percent Population Identifying as Hispanic or Latino	Calculated
ASIAN	Population Identifying as Asian	DP5_HC01_VC75
PERCENT_ASIAN	Decimal Percent Population Identifying as Asian	Calculated
AMIND_ALASKAN	Population Identifying as American Indian or Native Alaskan	DP5_HC01_VC74
PERCENT_AMIND_ALASKAN	Decimal Percent Population Identifying as American Indian or Native Alaskan	Calculated
HAWAIIAN_PACIFIC_ISL	Population Identifying as Native Hawaiian or Pacific Islander	DP5_HC01_VC76
PERCENT_HAWAIIAN_PACIFIC_ISL	Decimal Percent Population Identifying as Native Hawaiian or Pacific Islander	Calculated
OTHER	Population Identifying as Other	DP5_HC01_VC77
PERCENT_OTHER	Decimal Percent Population Identifying as Other	Calculated
TWO_RACES	Population Identifying as Two or More Races	DP5_HC01_VC64
PERCENT_TWO_RACES	Decimal Percent Population Identifying as Two or More Races	Calculated
WHITE	Population Identifying as White	DP5_HC01_VC72
PERCENT_WHITE	Decimal Percent Population Identifying as White	Calculated
POP_OVER3_SCHOOL	Population Over Age 3 Enrolled in School	DP2_HC01_VC75
PERCENT_POP_OVER3_SCHOOL	Decimal Percent Population Over Age 3 Enrolled in School	Calculated
POP_UNDE5	Population Under Age 5	DP5_HC01_VC07
PERCENT_POP_UNDE5	Decimal Percent Population Under Age 5	Calculated
POP_AGE_5_9	Population Age 5 to 9	DP5_HC01_VC08
PERCENT_POP_AGE_5_9	Decimal Percent Population Age 5 to 9	Calculated
POP_AGE_10_14	Population Age 10 to 14	DP5_HC01_VC09
PERCENT_POP_AGE_10_14	Decimal Percent Population Age 10 to 14	Calculated
POP_AGE_15_19	Population Age 15 to 19	DP5_HC01_VC10
PERCENT_POP_AGE_15_19	Decimal Percent Population Age 15 to 19	Calculated
ENGLISH_SPEAKING	English-Speaking Population	DP2_HC01_VC167
PERCENT_ENGLISH_SPEAKING	Decimal Percent English-Speaking Population	Calculated
SPANISH_SPEAKING	Spanish-Speaking Population	DP2_HC01_VC172
PERCENT_SPANISH_SPEAKING	Decimal Percent Spanish-Speaking Population	Calculated
ASIAN_PACIFIC_SPEAKING	Asian Language-Speaking Population	DP2_HC01_VC176
PERCENT_ASIAN_PACIFIC_SPEAKING	Decimal Percent Asian Language-Speaking Population	Calculated
OTHER_SPEAKING	Other-Speaking Population	DP2_HC01_VC178
PERCENT_OTHER_SPEAKING	Decimal Percent Other-Speaking Population	Calculated
OTHER_INDOEURO_SPEAKING*	Other Indo-European Language-Speaking Population*	DP2_HC01_VC173*
PERCENT_OTHER_INDOEURO_SPEAKING	Decimal Percent Other Indo-European Language-Speaking Population*	Calculated*

* Please note that all other language fields are for populations speaking that language at home and speaking English "Less than Very Well", for this field it is only speaking other Indo-European languages at home.

Figure V. Field Name Definitions and Corresponding U.S. Census Bureau 2007-2011 5-Year American Community Survey Fields.

6. Incorporating NEOSEC Data

After running the tool to identify communities that meet the user's criteria, the user may choose to see which NEOSEC member organizations are currently operating in or near the area. There are two ways to do this.

- i. Use aggregated NEOSEC Data (preferred method if user is uncertain which organizations are operating in an area)

In the Catalog, navigate to the Data folder and open the NEOSEC.gdb. The aggregated NEOSEC data is within these files (Fig. W). The data files provided are as follows:

'NEOSEC_ALL' is a compilation of all the data from the 18 participating organizations, including all program type information for each organization.

'NEOSEC_CONTACT' provides the estimated aggregate minimum and maximum contact hours for all 18 organizations for each programming type, and total estimated aggregate minimum and maximum contact hours for each community.

'NEOSEC_HS_INTERNSHIP' provides estimated high school internship contact hours in each community for each organization, as well as total estimated high school internship contact hours for each community.

'NEOSEC_MATERIALS' provides estimated materials contact hours in each community for each organization, as well as total materials contact hours for each community. Due to the difficulty of estimating contact hours provided by materials, this information was not included in the overall analysis.

'NEOSEC_MULTIDAY' provides estimated multi-day program contact hours in each community for each organization, as well as total estimated multi-day program contact hours for each community.

'NEOSEC_OFF' provides estimated offsite day program contact hours in each community for each organization, as well as total estimated offsite day program contact hours for each community.

'NEOSEC_ONSITE' provides estimated onsite day program contact hours in each community for each organization, as well as total estimated onsite day program contact hours for each community.

'NEOSEC_OVERNIGHT' provides estimated overnight program contact hours in each community for each organization, as well as total estimated overnight contact hours for each community.

'NEOSEC_PARTICIPATING' maps the locations of all of the participating members as points.

'NEOSEC_POINTS_FINAL' maps the locations of all NEOSEC members as points.

‘NEOSEC_PUBLIC’ provides estimated public event contact hours in each community for each organization, as well as total estimated public event contact hours for each community.

‘NEOSEC_SCIENTIST’ provides estimated scientist partnership program contact hours in each community for each organization, as well as total estimated scientist partnership program contact hours for each community.

‘NEOSEC_TRAININGS’ provides estimated training contact hours in each community for each organization, as well as total estimated training contact hours for each community.

‘NEOSEC_UG_INTERNSHIP’ provides estimated undergraduate internship contact hours in each community for each organization, as well as total estimated undergraduate internship contact hours for each community.

‘MASTER’ is a template file for entering new organizations, and contains fields for all the program types and rows for each of the spatial communities.

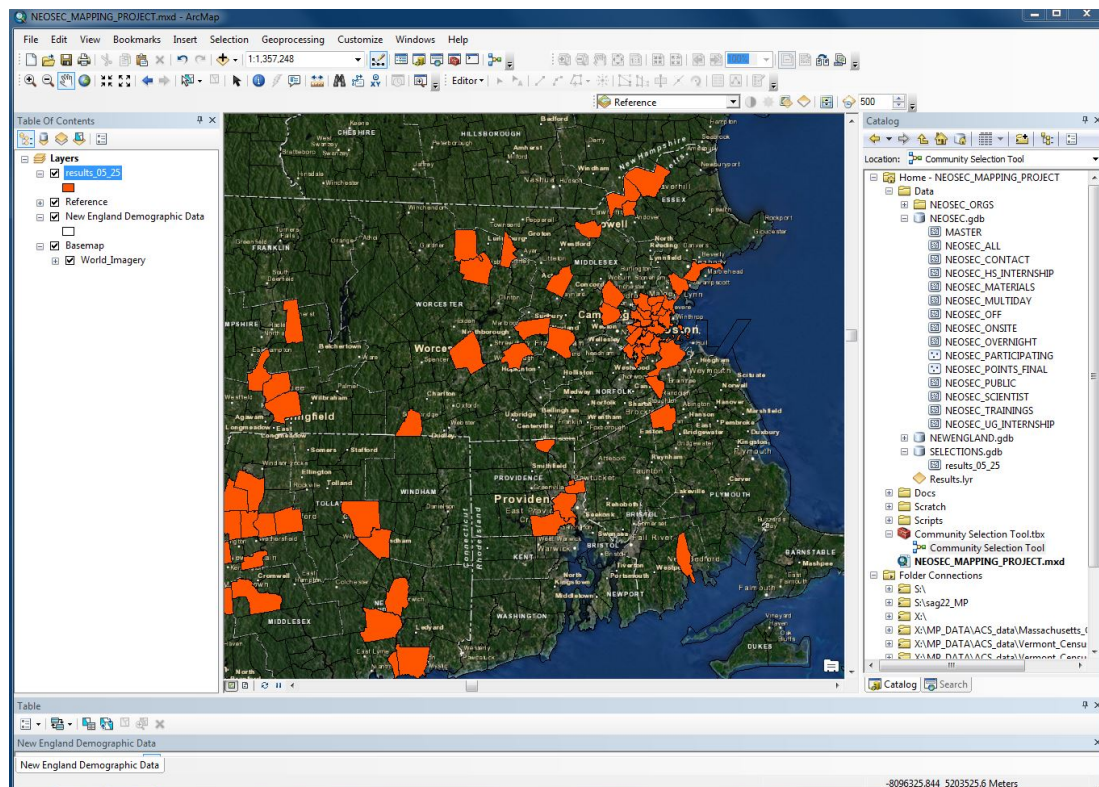

Figure W. Results from the Community Selection Tool and the NEOSEC aggregated data files in the Catalog.

Adding a layer from the NEOSEC aggregated data (example used here is the ‘NEOSEC_PROGRAMS’ layer with the symbology adjusted to show the presence of programs) (Fig. X).

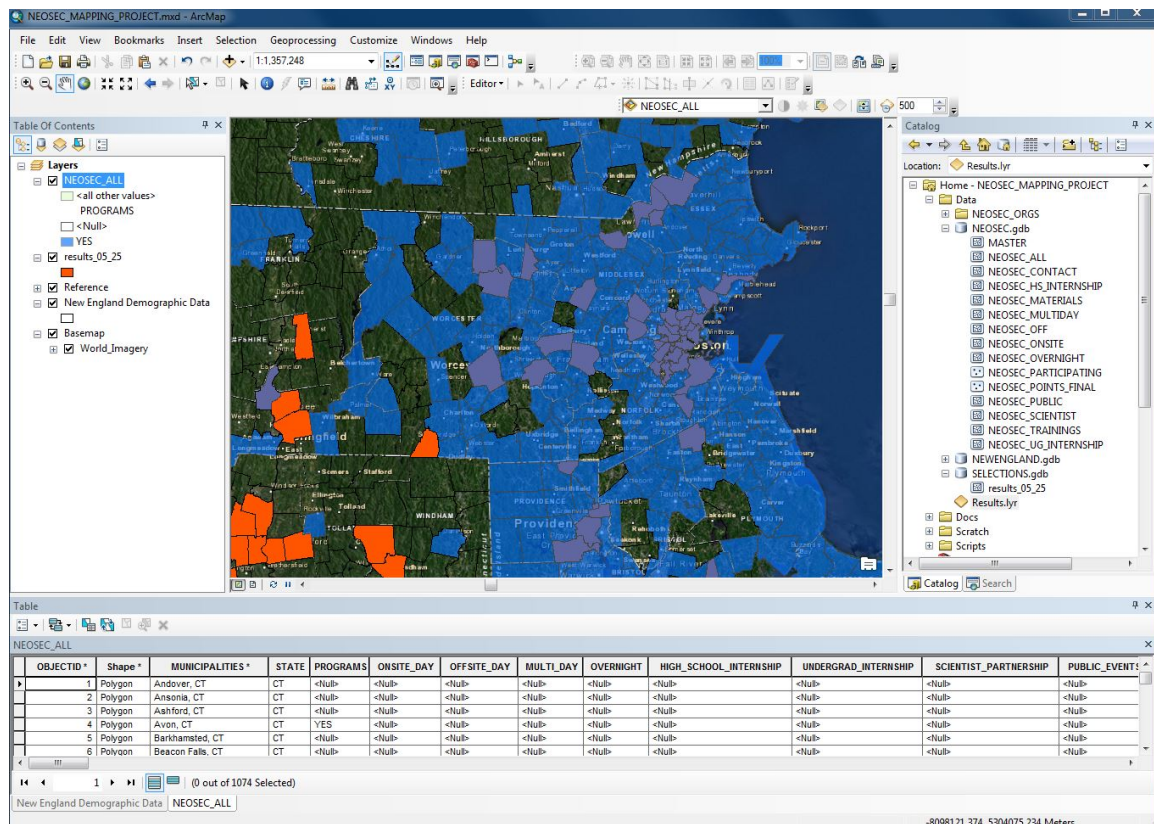

Figure X. Selected communities and NEOSEC member programs. Member programs are in semi-transparent blue; selected communities are opaque orange and are visible beneath the program layer.

If the user would like more information on which organizations offer programming and what types of programming are offered in the community, the Identify tool will open a window with more details (Field descriptions in Fig. Y).

Field Name Abbreviation	Full Name
ON	Onsite Day Program
OFF	Offsite Day Program
MULTI	Multi-Day Program
HS	High School Internship
UG	Undergraduate Internship
SCI	Scientist Partnership Program
PUB	Public Event
TRAIN	Training
MAT	Materials

Figure Y. Field name descriptions for NEOSEC files.

- ii. Use Data from individual NEOSEC Members (for users who are already aware of organizations operating in the area)

Navigate to the NEOSEC_ORGS folder within the Data folder in NEOSEC_MAPPING_PROJECT. Within the folder are individual geodatabases for each of the participating organizations, with individual feature classes for each program type, as well as a feature class with the aggregated information for each organization (Fig. Z). Abbreviations for organizations are described in Figure AA.

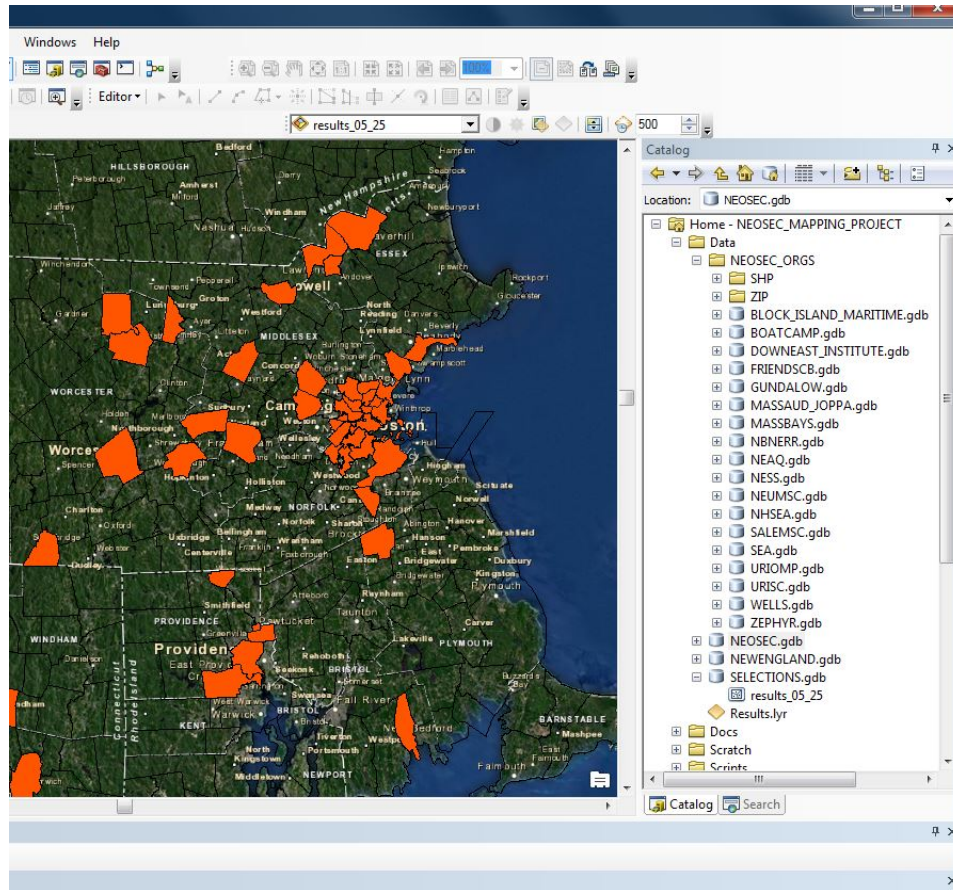

Figure Z. NEOSEC Organization geodatabases within the Data folder.

Abbreviated Organization Names	3-Letter	Full Name
BIM_PROGRAMS	BIM	Block Island Maritime Institute
BC_PROGRAMS	BC	BOAT CAMP Nature School
DEI_PROGRAMS	DEI	Downeast Institute for Applied Marine Research and Education
FRIENDS_PROGRAMS	FCB	Friends of Casco Bay
GUND_PROGRAMS	GUN	Gundalow Company
MASSAUDJ_PROGRAMS	MJF	Massachusetts Audubon Joppa Flats
MASSBAY_PROGRAMS	MB	Massachusetts Bays National Estuary Program
NBNERR_PROGRAMS	NBN	Narragansett Bay National Estuarine Research Reserve
NEAQ_PROGRAMS	NEAQ	New England Aquarium
NESS_PROGRAMS	NES	New England Science and Sailing Northeastern University Marine Science Center
NEUMSC_PROGRAMS	NEU	New Hampshire Sea Grant\University of New Hampshire Cooperative Extension
NHSEA_PROGRAMS	NHS	Salem Sound Coastwatch
SALEMSC_PROGRAMS	SSC	Sea Education Association
SEA_PROGRAMS	SEA	University of Rhode Island Office of Marine Programs
URIOMP_PROGRAMS	OMP	University of Rhode Island Inner Space Center
URISC_PROGRAMS	ISC	Wells National Estuarine Research Reserve
WELLS_PROGRAMS	WEL	
ZEPHYR_PROGRAMS	ZEP	Zephyr Education Foundation

Figure AA. Abbreviations used for participating NEOSEC member organizations.

The user may then add whatever layers they choose to the Table of Contents and adjust symbology as desired. In this example, the New England Aquarium (NEAQ) has been added in green; communities that are both meeting the Community Selection Tool search criteria and are currently served by the New England Aquarium are in light orange-green, while communities that are not being served by the New England Aquarium but meet the criteria are in darker orange, and communities that are being served but do not meet the criteria are green only (Fig. AB).

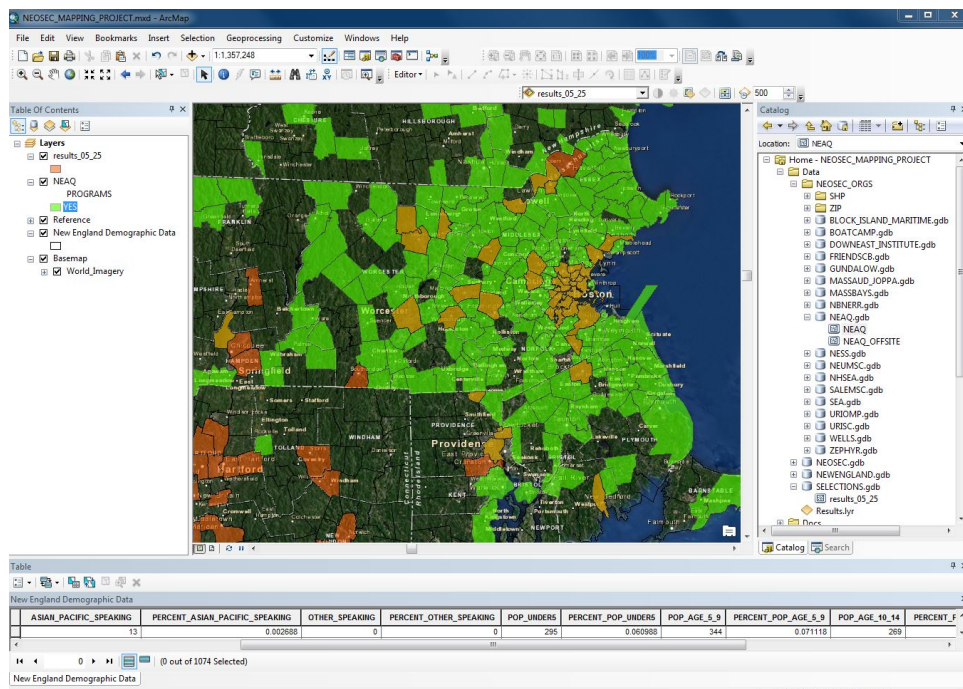

Figure AB. Results from the Community Selection Tool overlaid with communities served by the New England Aquarium.

The user may add as many organization layers as they wish; here the Northeastern University Marine Science Center (in pink) is added to the previous map (Fig. AC).

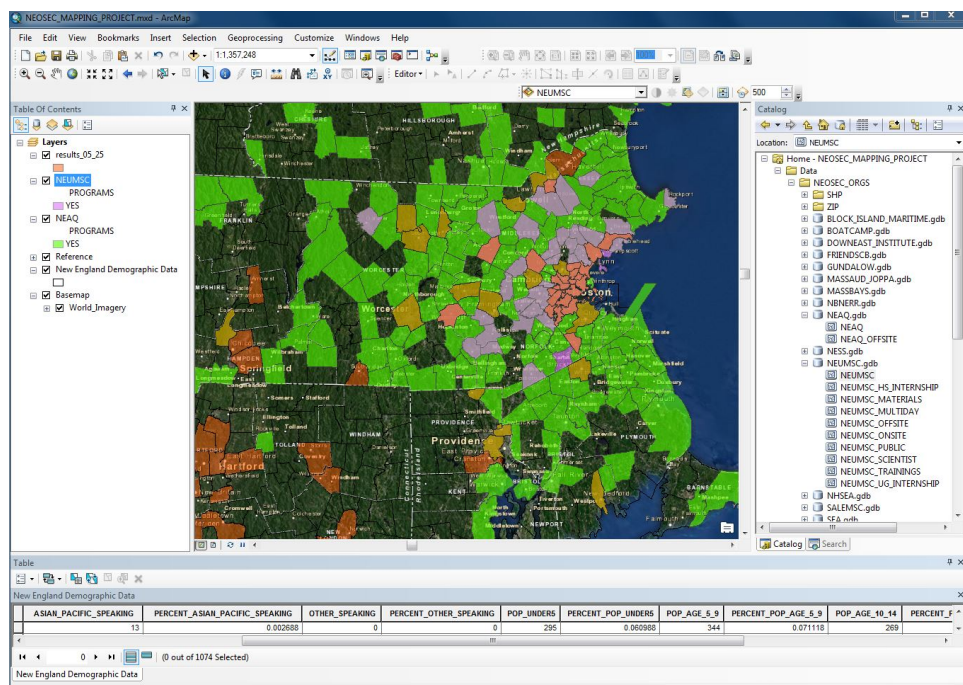

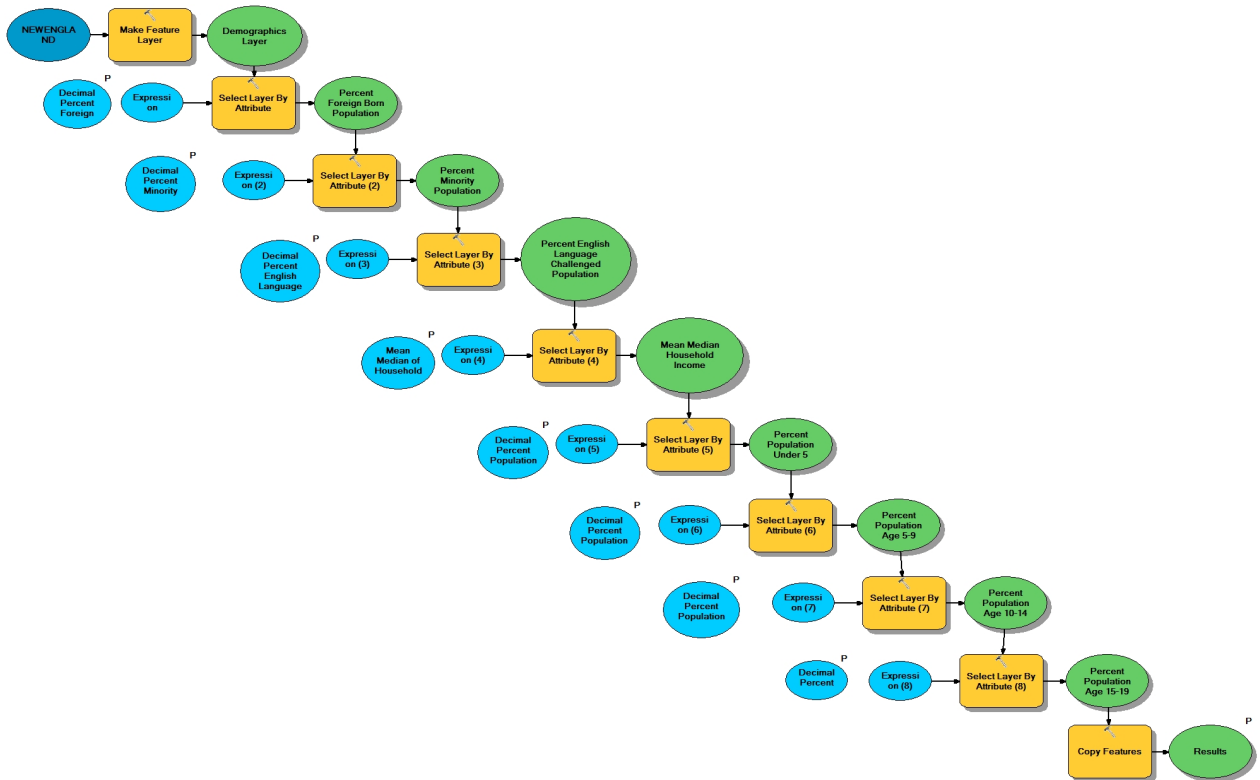

Figure AC. Results from the Community Selection Tool overlaid with communities served by the New England Aquarium and the Northeastern University Marine Science Center.

APPENDIX IV: NEOSEC Member Survey

NEOSEC Mapping Tool –Sarah Sunu

This survey is designed to help map the community impact of NEOSEC member organizations. The goal of this survey is to determine what communities you currently offer programs in, what types of programs are offered, and which audiences are being targeted.

Depth of impact is also being measured through contact hours, as well as up-to-date information on which Ocean Literacy Principles your organization is targeting.

Time required to take this survey will vary depending on the size of your organization; you may leave the survey and come back to resume it at a later point (please note, you must click the 'Next' button to save the page of answers that you are on, and will need to reenter the survey using the link in the email you received). To navigate away from the survey at any time, close the browser or go to another web address. You will be able to return to the survey through the email link, and it will take you back to where you left off. Once you click the 'Done' button on the final 'Thank You' page, the email link will be closed and you will no longer be able to return to the survey (though you can always contact Sarah Sunu if an error has occurred).

Since NEOSEC member organizations come in many sizes, please answer the questions in the manner that seems most appropriate for your specific organization, department, or program. For example, if you are the department that is most involved in NEOSEC (such as the outreach department at a research institution), answer just for your department, not the whole institution.

Thank you for your time and assistance with this project, and we look forward to discussing the results!

*** 1. Name of Organization**

*** 2. Organization Address (physical location of organization offices)**

3. What type of programs or services does your organization offer (please select all that apply)?

- ☐ ON-SITE Day Programs (e.g. visitors come to your site to visit or for programming)
- ☐ OFF-SITE Day Programs (e.g. programming in local schools, in the community, at offsite field locations)
- ☐ MULTI-DAY Youth Programs (e.g. multi-day summer program such as a Camp or Academy)
- ☐ OVERNIGHT Youth Programs (e.g. Residential Summer Camps, multi-day Enrichment Programs)
- ☐ HIGH SCHOOL-LEVEL Internship Programs
- ☐ COLLEGE/UNIVERSITY-LEVEL Internship Programs
- ☐ SCIENTIST Partnership Programs (e.g. Collaborating with scientists/researchers to produce and communicate research)
- ☐ PUBLIC EVENTS (e.g. Public Lectures, Open Houses, Conferences, Symposia, etc.)
- ☐ TRAININGS (e.g. Teacher Professional Development, Volunteer Preparation)
- ☐ DEVELOPING\SHARING MATERIALS (e.g. providing information on ocean issues, lesson plans on ocean science)

NEOSEC Mapping Tool --Sarah Sunu

4. How many average per person contact hours does your organization provide through the following:

One selection is allowed per row. Please answer as appropriate for one average program (i.e., a person attending one training program would receive 6 contact hours).

	<1 hour	1-3 hours	3-5 hours	5-10 hours	10-15 hours	15-25 hours	>25 hours
ON-SITE Day Programs (e.g. visitors come to your site to visit or for programming)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

NEOSEC Mapping Tool --Sarah Sunu

31. What are the target audience age ranges for your ON-SITE DAY programs? (May select more than one)

- ☐ NA (no on-site programming offered)
- ☐ Preschool
- ☐ School-Age (K-5th grade)
- ☐ Middle-School (6th-8th grade)
- ☐ High School (9th-12th grade)
- ☐ Undergraduate
- ☐ Graduate
- ☐ Adults
- ☐ Professionals\Academics\Teachers

32. What are the target audience age ranges for your OFF-SITE DAY programs? (May select more than one)

- ☐ NA (no offsite programming offered)
- ☐ Preschool
- ☐ School-Age (K-6th grade)
- ☐ Middle-School (6th-8th grade)
- ☐ High School (9th-12th grade)
- ☐ Undergraduate
- ☐ Graduate
- ☐ Adults
- ☐ Professionals\Academics\Teachers

33. What is the target audience age for your MULTI-DAY Youth programs (such as summer camps or academies)?

- ☐ NA (no program offered)
- ☐ Preschool
- ☐ School-Age (K-6th grade)
- ☐ Middle-School (6th-8th grade)
- ☐ High School (9th-12th grade)
- ☐ Undergraduate

34. What is the target audience age for your OVERNIGHT YOUTH programs?

- ☐ NA (no overnight programs offered)
- ☐ Preschool
- ☐ School-Age (K-6th grade)
- ☐ Middle-School (6th-8th grade)
- ☐ High School (9th-12th grade)
- ☐ Undergraduate

35. What is the target age range for your PUBLIC EVENTS (more than one option may be selected)?

- ☐ NA (no Public Events offered)
- ☐ Preschool
- ☐ School-Age (K-6th grade)
- ☐ Middle-School (7-8th grade)
- ☐ High School (9-12th grade)
- ☐ Undergraduate
- ☐ Graduate
- ☐ Adults
- ☐ Professionals\Academics\Teachers

36. What is the target age range for your TRAININGS (more than one option may be selected)?

- ☐ NA (no Trainings offered)
- ☐ Preschool
- ☐ School-Age (K-6th grade)
- ☐ Middle-School (7-8th grade)
- ☐ High School (9-12th grade)
- ☐ Undergraduate
- ☐ Graduate
- ☐ Adults
- ☐ Professionals\Academics\Teachers

39. How are program themes selected (please select all that apply)?

- ☐ Perceived Community Interest
- ☐ Researcher Interests
- ☐ Local Issues
- ☐ Global Issues
- ☐ Organization Objectives
- ☐ Requests from Community
- ☐ Academic Criteria (i.e. topics from Massachusetts MCAS examinations, etc.)
- ☐ Student Interests

Other (please specify)

40. How are audiences selected for your programs or materials (please select all that apply)?

- ☐ Perceived Community Interest
- ☐ Organization Objectives
- ☐ Requests from Community
- ☐ Funding Availability

Other (please specify)

41. Which Ocean Literacy Principles are emphasized or targeted in your programs (please select all that apply)?

- ☐ 1. The Earth has one big ocean with many features.
- ☐ 2. The ocean and life in the ocean shape the features of Earth.
- ☐ 3. The ocean is a major influence on weather and climate.
- ☐ 4. The ocean made Earth habitable.
- ☐ 5. The ocean supports a great diversity of life and ecosystems.
- ☐ 6. The ocean and humans are inextricably interconnected.
- ☐ 7. The ocean is largely unexplored.

NEOSEC Mapping Tool --Sarah Sunu

Thank you for your help in gathering this important information! We appreciate your willingness to share your organization's work.

Sarah Sunu will be contacting you with a draft of your organization's spatial impact map for your feedback as part of the tool-building process. Further opportunities to be involved in the project will be available this winter, and the project results and write-up will be distributed in the spring.
